MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST · TOM HAMMOND, ANALYST · DATA MONTH: SEPTEMBER, 1982

Missouri unemployment dropped in September, according to preliminary estimates of the labor force, the second straight month to show a decline. As in August, the drop was less than seasonally expected, suggesting that no underlying improvement in unemployment has yet occurred. The unemployment rate dropped from 9.0 to 8.8 percent in September, as unemployment decreased by 5900 to 206,100.

Total employment decreased by about 6700 to 2,133,000 in September. This drop, in a month when a seasonal gain is the normal pattern, leaves total employment about 36,100 below the year-earlier level.

Nonagriculaturl wage and salary employment rose seasonally in September as the new school year caused state and local government employment to increase by 15,300 jobs to 255,400. This accounted for all the increase in nonfarm payroll employment, as no other reported industry group showed substantial change. Total nonagricultural wage and salary employment increased by 13,600 to 1,970,800, but this is still about 19,000 jobs below the year-earlier level.

Although total nonagricultural wage and salary employment normally move together, some months experience divergent movements, as was the case in September. Part of the difference might be attributed to the different concepts involved, but sampling error in data used to make the final estimates may be a more likely cause.

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

Hours and earnings of manufacturing production workers showed little change in September. The factory workweek slipped by one-tenth of an hour to 38.2 hours, but a 6 cents increase in average hourly earnings (to $8.52) led to a $1.44 increase in average weekly earnings to $325.46. The weekly earnings figure represents an increase of 4.6 percent from year-earlier earnings. Establishments manufacturing lumber and wood products, nonelectrical machinery, instruments, and chemicals reported decreases of an hour or more in average weekly hours, while increases of an hour or more were reported in primary metal industries and in stone, clay, and glass products.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity increased in September due to the implementation of the Federal Supplemental Compensation (FSC) program. The total number of weeks of unemployment claimed under the various programs increased by 6 percent from August to 340,300 in September, while benefit payments increased by 7.3 percent of $24.4 million. The number of reference week claimants climbed by 5600 to 81,600. If only the regular state UI program is considered, total weeks claimed increased by about 1 percent to 320,000, while the number of initial claims fell by 6.4 percent to 49,400.

ECONOMIC CONDITIONS AND OUTLOOK

National unemployment in September reached the highest level since before World War II, as 11,260,000 persons, 10.1 percent of the civilian labor force, were jobless, on a seasonally adjusted basis. The number of unemployed persons who lost their jobs was estimated to have increased by 726,000 in September, as unemployment climbed in the construction and manufacturing industries.

Total employment fell back by about 119,000 between August and September, while nonfarm payroll employment dropped by about 230,000, as the number of jobs decreased in durable goods manufacturing, trade, and state and local government.

Although total employment has dropped by about 1.4 million in the past 16 months, it still remains high by historical standards. It was not until late 1979 that total employment first reached its current level.

The economy is not showing any forward momentum. Consumer spending has increased for the past three quarters, but not greatly. Real gross national product has shown small increases in the past two quarters, but inventory buildups apparently accounted for the most recent increase, as industrial production has continued downward. The index of leading economic indicators turned down in August following four months of increases, seeming to take some of the wind out of the sails of incipient recovery.

With Missouri unemployment remaining high in the normally low fall months and with no evidence of forward momentum in the economy, it now appears that any significant improvement in the Missouri labor markets is some months away. Even if improvement should begin early in 1983, it would be masked by the seasonal drops in employment and increases in unemployment that normally occur in the winter. Thus, it now looks like it will be spring before any substantial improvements in the Missouri labor markets would be evident.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

SEPTEMBER, 1982

RANDALL E. CLARK, ANALYST

The continuing weakness of the area labor market was evident in September's labor statistics. There is normally a sizable drop in the unemployment rate from August to September as summer job seekers return to school and school employees return to work, but in 1982 the rate actually increased slightly from August to September.

Wage and salaried employment in September 1982 was 594,900, up by 900 from the August 1982 total of 595,000. The reopening of area schools accounted for the gain, with state and local government showing an increase of 5,400 jobs. With the exception of wholesale trade, which had a small seasonal gain, all other major industry groups showed lower employment in September. Plant closings in the garment and petroleum industries caused a net loss of 1,400 jobs in manufacturing. Losses in transportation, retail trade and insurance were the result of the slow economy. Construction and services had seasonal losses.

Wage and salaried employment fell by 30,300 from September 1981 to September 1982. None of the area's major industries has been spared by the events of the last twelve months; job losses have ranged from 800 in finance, insurance and real estate to 9,400 in manufacturing. These losses have occurred despite the fact that some sectors of the economy were showing relatively low employment levels in September 1981.

Total unemployment on a place-of-residence basis was 56,900 in September 1982 for 8.5 per cent of the labor force, compared to 57,100 in August 1982 for 8.4 per cent of the labor force and 46,400 in September 1981 for 6.8 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

Unemployment is expected to remain high in the area in October 1982. Some automobile assembly workers may be recalled to work, but seasonal layoffs in construction and services and economic layoffs in manufacturing and transportation will offset this gain. Employment in wholesale and retail trade would normally begin increasing in October in preparation for the holiday season, but gains in this industry are expected to be small and late because of the condition of the economy. Unemployment is expected to be 8.5 per cent of the labor force in October 1982, compared to 8.5 per cent in September 1982 and 7.5 per cent in October 1981.

As the weather turns colder, area unemployment is expected to move even higher. Further job losses are expected in services, construction, manufacturing and transportation. Seasonal gains in retail trade will be relatively small. It does not appear that the economy will be able to begin a recovery in November, despite the fact that interest rates and the rate of inflation are finally coming down. Unemployment is expected to be 8.7 per cent of the labor force in November 1982, compared to 6.8 per cent in November 1981.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA – MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 31,197 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of September 1982. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	17.9
	22-44	65.6
	45 and over	16.5
Sex:	Male	60.7
	Female	39.3
Racial or Ethnic Groups:		
	Black	24.2
	Other Non-White	0.7
	Hispanic	1.8

Miscellaneous Characterics	Per Cent
Unemployment Insurance Claimants	59.4
Veterans	22.3
Handicapped	3.4
Economically Disadvantaged	10.3

Source: SMSA 3760, ESARS Table 91, dated 9/30/82.

JOB PLACEMENTS

During September 1982, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 6,162 and job placements totaled 2,077. There were 1,141 veteran referrals in September 1982, with 217 veteran placements. During August 1982, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 7,421 and job placements totaled 2,594. There were 1,150 veteran referrals in August 1982, with 231 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

SEPTEMBER, 1982

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis Area's unemployment rate stood at 9.7 in September. In August the rate was 9.6 and in September 1981 it was estimated to be 7.9. Over the month, the number of unemployed residents declined 0.4% and total employment declined 1.7%. Unemployment normally declines about 8.0% from August to September but overall economic conditions kept unemployment almost steady this year. Over the year, unemployment has increased 20,500 and employment declined 15,000. During the first 9 months of 1982, the area's unemployment rate has averaged 9.6, compared to 8.6 for the corresponding period in 1981. Extreme winter weather in the first part of 1982 and the recession throughout all of this year have combined to cause the year-to-year 9 month average increase. There were 1500 labor disputants in September, 1400 in August, and 700 in September 1981.

MANUFACTURING

Manufacturing employment declined 1400 from August as gains in four industries were outnumbered by continued losses in six others. The settlement of a labor dispute is responsible for a 300 increase in fabricated metals and in motor vehicles 600 workers were recalled at an auto assembly plant in preparation of the October addition of a second production shift. An indefinite layoff in primary metals idled 900 workers at an Illinois steel plant. Over the year, employment increases occurred in motor vehicles and aircraft and parts. All other manufacturing industries registered declines causing total manufacturing employment to be 13,500, or -5.8%, lower than September 1981.

NONMANUFACTURING

Seasonal school related increases in transportation, services, and government combined with expanded activity in non-residential construction caused nonmanufacturing employment to increase 4200 over August. Settlement of a labor dispute in retail trade allowed 500 auto dealer mechanics to return to work in September. A strike affecting 1100 teachers and layoffs occurring in the public schools held local government employment increases below normal seasonal levels. Over the year, non-manufacturing employment declined 7900. Employment increases occurred in construction, communications, services, and federal government but general economic conditions caused all other industries to register declines.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 1100 in September from August. In the Missouri portion of the SMSA they were down 1600 and in Illinois portion they were up 500.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	June	July	Aug.	Sept.
INA	6	12	19	12
Agriculture	53	55	45	46

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
SEPTEMBER, 1982

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force rose from 109,100 in August to 109,600 in September. This is the net result of a 100 decrease in total employment and a jump of 600 in the number of unemployed.

The number of unemployed persons rose from 7,600 in August to 8,200 in September. The rate of unemployment moved upward from 6.9 percent in August to 7.4 percent in September. In seven of the past ten years the rate of unemployment decreased between August and September.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment, estimated at 86,700, rose 1,900 from August. This is not a real gain as it mostly reflects the opening of local schools for the fall term. Manufacturing jobs, estimated at 17,000, were down 300 from August. Since one year ago, the loss of manufacturing jobs amounts to 1,600. Nonmanufacturing jobs rose 2,200 from August to reach 69,700 in September. Nonmanufacturing industries recording significant changes in employment levels during the 30-day period include: mining and construction, down 300; trade, up 200; services, up 300; and government, up 2,000. The jump in government results from the opening of schools for the fall term.

HOURS AND EARNINGS

The average hourly earnings for manufacturing production and related workers rose from $7.53 in August to $7.66 in September. Average weekly hours decreased from 39.2 in August to 38.8 in September. Average weekly earnings rose $2.03 from August to reach $297.21 in September.

During September, 1981, the average hourly earnings amounted to $7.26, weekly hours worked averaged 40.3, and average weekly earnings were calculated at $292.58.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment is expected to show a slight decrease in October due to a reduction in manufacturing jobs. The nonmanufacturing industries will be characterized by stability during the 30-day period except for retail trade which should show an increase.

The number of unemployed persons is expected to increase slightly during October. The rate of unemployment will probably inch upward two or three-tenths of a percentage point.

MISSOURI AREA LABOR TRENDS

MISSOURI DEPARTMENT OF LABOR AND INDUSTRIAL RELATIONS DIVISION OF EMPLOYMENT SEC

INCLUDES CIVILIAN LABOR FORCE ESTIMATES FOR ALL AREAS PLUS LABOR MARKET REVIEWS FOR THE STATE
AND THE ST. LOUIS, KANSAS CITY, AND SPRINGFIELD SMSA'S

/ 12/22/82 S4530-3 A

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST **TOM HAMMOND, ANALYST** **DATA MONTH: OCTOBER, 1982**

Unemployment in Missouri dropped in October, falling below 200,000 for the first time since May. About 199,500 Missourians, or 8.7 percent of the civilian labor force, were unemployed in October. This was 8600 fewer than in September, when the unemployment rate was 8.9 percent.

Employment continued to drop in October. Total employment shrank by about 27,000 to 2,104,100, while nonfarm payroll employment dipped by 7800 jobs to 1,960,900. Small drops appeared to be spread through most industries; the largest decreases were in services (3800 jobs) and retail trade (3200 jobs). A seasonal gain of 6100 jobs in state and local government offset some of the declines. Compared to a year ago, most industries have lost employment. The few exceptions include services (up by 7300 jobs), construction (up by 2800 jobs), and motor vehicles and equipment manufacturing (up by 300 jobs).

The civilian labor force fell by nearly 36,000 from September to 2,303,600 in October; the latest figure is also below the year-earlier level.

The average workweek of manufacturing production workers increased two-tenths of an hour to 38.7 hours in October. This helped nudge average weekly earnings up by $2.48 from September to $331.27 in October, and increase of 6.3 percent

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

over the year-earlier level. Average hourly earnings were up only 2 cents in October to $8.56. Longer workweeks were reported in lumber and wood products; furniture and fixtures; fabricated metal products; electrical and electronic equipment; instruments and related products; and paper and allied products.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity increased in October as a result of the Federal Supplemental Compensation (FSC) program. The total number of weeks claimed under the various programs increased by 9.1 percent from September to 371,400 in October; benefit payments climbed by a similar percentage to $26.6 million. Initial claims were down by 13.5 percent between September and October.

In the regular UI program, claims dropped in October. Most industries experienced declines, with the largest being in construction. The principal exception was in transportation equipment manufacturing, which saw a gain in weeks claimed.

ECONOMIC CONDITIONS AND OUTLOOK

National unemployment climbed again to a new post-war record in October. Some 11.6 million Americans, 10.4 percent of the labor force on a seasonally adjusted basis, were jobless in October. Since the recession began in July 1981, unemployment has risen by 3.7 million and the unemployment rate has climbed more than 3 percentage points. Total employment has dropped by 1.8 million during the recession; the difference between this drop and the increase in unemployment, almost 2 million, is accounted for by the growth of the labor force during the period.

The latest estimate of the nation's output of goods and services during the third quarter shows no growth from the second quarter. Recovery remains elusive. With winter approaching, rising unemployment in Missouri appears a certainty.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

OCTOBER, 1982

RANDALL E. CLARK, ANALYST

For the first time since July, the area unemployment rate showed a sizable decrease from the previous month's figure. Recalls of workers who had been laid off (mostly automobile assemblers and school employees) accounted for some of the decrease. However, a good deal of the drop in unemployment was caused by a reduction in the area's labor force. While a decrease in the labor force is normal between September and October (persons who have held summer jobs through September tend to leave the labor force when their jobs end), this year's decrease (over 8,000) was much larger than usual. Although there is no way to measure the number of "discouraged workers" - persons who want to work but have stopped looking for work because they feel that no jobs are available to them - at the local level, the sharp declines in the civilian labor force over the last month and over the last twelve months suggest that the number of such "discouraged workers" is at an all-time high.

Wage and salaried employment in October 1982 was identical to the September 1982 figure of 593,800. One shift was recalled to work at an area auto assembly plant, with some 2,200 persons regaining their jobs. Some 3,500 school employees returned to work as well. However, employment was seasonally lower in construction-related manufacturing industries, the printing industry, wholesale trade and services. The employment loss in services was aggravated by a strike by professional football players; the strike caused layoffs of workers in affiliated vending and service activities.

Wage and salaried employment fell by 27,000 from October 1981 to October 1982. Ironically, the area's troubled automobile industry showed the only notable employment gain over the 12-month period (short-term layoffs pushed down the industry's employment in October 1981). Employment losses were heaviest in wholesale and retail trade, services, transportation, construction-related manufacturing and oil refining (the area's two major oil refineries both shut down during 1982).

Total unemployment on a place-of-residence basis was 52,700 in October 1982 for 8.0 per cent of the labor force, compared to 57,600 in September 1982 for 8.6 per cent of the labor force and 51,400 in October 1981 for 7.5 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

The area unemployment rate is expected to increase in November 1982. One employer has announced a plant shutdown from November through January, with 1,100 workers to be laid off. Other layoffs are expected in manufacturing, transportation, services, wholesale trade and construction. With the approach of the holiday season, area retailers will begin hiring extra workers, but the state of the economy will hold these gains down. Unemployment is expected to be 8.3 per cent of the labor force in November 1982, compared to 8.0 per cent in October 1982 and 6.8 per cent in November 1981.

Layoffs are expected to continue in December 1982. Major employers in manufacturing and transportation have announced employment cutbacks, and additional cuts are also expected in services and construction. The Christmas rush will produce some extra jobs in retail trade, but the number of jobs will be less than usual. Unemployment is expected to be 8.5 per cent of the labor force in December 1982 compared to 7.2 per cent in December 1981.

SPECIAL ENERGY REPORT

The availability of fuel for heating in the coming winter months has been a topic for considerable discussion in recent weeks. However, it does not appear that high heating costs will have any noticeable effect on the area labor market, at least for the time being.

CHARACTERISTICS OF THE INSURED UNEMPLOYED IN THE KANSAS CITY AREA (MISSOURI SIDE ONLY)

OCTOBER, 1982

Insured Unemployed by Age and Sex

Age	Male Per Cent	Female Per Cent	Total Per Cent
Under 25	18.8	20.1	19.3
25-34	40.7	32.2	37.5
35-44	20.3	22.8	21.3
45-54	11.8	13.5	12.4
55-64	7.4	9.6	8.2
65 and Over	0.9	1.6	1.1
Unreported	0.1	0.2	0.2

Insured Unemployed by Industry (SIC)

Industry	Per Cent
Agriculture	0.4
Mining	0.1
Construction	8.1
Manufacturing	42.7
Transportation, Communications & Utilities	5.6
Wholesale & Retail Trade	15.4
Finance, Insurance & Real Estate	2.8
Services	22.2
All Other	2.6
Information not available	0.1

Insured Unemployed by Occupation (DOT)

Occupation	Per Cent
Professional, Technical & Managerial	9.5
Clerical	14.7
Sales	3.2
Services	11.3
Farming, Fishing & Forestry	0.5
Processing	1.9
Machine Trades	7.5
Bench Work	5.1
Structural Work	19.3
Miscellaneous	10.9
Information not available	16.1

The number of insured unemployed counted for the above percentages was 12,143; 7,495 were male and 4,648 were female.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

OCTOBER, 1982

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis Area's unemployment rate declined slightly in October from September but remained well above the 1981 level. The addition of a second production shift at one local auto assembly plant and the temporary recall of workers at a steel plant helped reduce unemployment this month. Nonagricultural wage and salaried employment increased 4200 over the month but declined 18800 from October 1981. Little or no change is expected in the area's unemployment rate in November and December. The above mentioned steel workers will be on lay-off status again during the rest of 1982, automobile employment will decline, and further layoffs are expected in other manufacturing industries. There were 300 labor disputants in October, 1500 in September, and 600 in October 1981.

MANUFACTURING

The second shift addition at an auto assembly plant increased motor vehicle employment by 1000 in October from September. Primary metals increased 300 due to a temporary recall while most other industries continued to register employment decreases or remained stable. Over the year, manufacturing employment declined 14400. All major industries reduced employment levels except motor vehicles, +300; aircraft, +1100; and beverages, +100.

NONMANUFACTURING

State and local government employment increased 4400 over the month due to the settlement of a local school teachers strike and continued seasonal increases in other local school districts. Non-residential construction remained strong, +100, and retail trade registered an 800 increase. Total nonmanufacturing employment increased 4100 from September but declined 4400 from October 1981. The recession has continued to cause employment declines over the year in transportation, -3000, wholesale trade, -1200, finance, insurance and real estate, -600, and mining, -400. Construction employment increased 3700, the services added 1000 employees, and increased defense spending caused federal government employment to rise by 600.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 900 in October from September. In the Missouri portion of the SMSA they were down 600 and in the Illinois portion they were down 300.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	July	Aug.	Sept.	Oct.

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
OCTOBER, 1982

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force decreased from 110,100 in September to 108,300 in October. This is the net result of a 1,900 decrease in employment and an increase of 100 in employment.

The number of unemployed persons rose from 8,300 in September to 8,400 in October. The rate of unemployment rose from 7.5 percent of the labor force in September to 7.7 percent in October. Layoffs in manufacturing and construction fostered most of the rise in unemployment.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment dipped from 86,900 in September to 86,500 in October. Manufacturing jobs, estimated at 16,400, fell 500 from September. The durable goods segment of manufacturing accounted for the entire drop while total nondurable manufacturing jobs remained at the September level. Nonmanufacturing employment, estimated at 70,100, rose 100 from September. Nonmanufacturing industries recording significant changes in employment levels from September to October include: mining and construction, down 100; transportation and utilities, down 100; trade, down 100; services up 200; and government, up 200.

HOURS AND EARNINGS

Average hourly earnings for manufacturing production and related workers move upward from $7.58 in September to $7.67 in October. Average weekly hours rose four tenths of an hour from September to reach 39.7 hours in October.

During October, 1981, the average hourly earnings came to $7.58, weekly hours averaged 38.3 and average weekly earnings were calculated to $290.31.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment will probably show very little change from October to November. A slight drop in manufacturing jobs should be off-set by increases in retail trade establishments. The completion of the Battlefield Mall expansion in conjunction with extra help being hired to handle the Christmas rush will push trade employment up by several hundred.

The rate of unemployment for November is expected to remain near the October level. Seasonal influences, especially the passing of the Christmas season, will push the level of unemployment up during January of 1983.

1/31/83 S4530-3 A

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST — TOM HAMMOND, ANALYST

DATA MONTH: NOVEMBER, 1982

Missouri unemployment jumped sharply and total employment tumbled in November, according to preliminary estimates of the labor force. About 2,060,000 Missourians were employed in November and 214,000 were jobless. This represents a drop of more than 45,000 in employment and an increase of more than 12,000 in unemployment from October, as the unemployment rate climbed from 8.7 percent to 9.4 percent. The increase in unemployment parallels the increase in national unemployment in November and brings Missouri unemployment closer to the national rate, which was 10.4 percent, not seasonally adjusted, in November. Missouri unemployment is now at its highest level and employment at its lowest level since last winter.

The significance of these movements in the labor force data is not entirely clear. Part of the increase in Missouri unemployment can be traced to increases in insured unemployment, as unemployment insurance claims increased in most industries between the October and November reference weeks. Among the more notable increases were those in construction, services, trade, and manufacturing of leather products, primary metals, and machinery. Much of the change in the labor force data, however, can be traced to the input of the Current Population Survey (CPS) to the estimating process. The CPS data have large sampling errors; monthly movements may not have much significance and should be interpreted cautiously.

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

Other available data do not show the same degree of deterioration. The severity of the drop in total employment was not matched by the relatively small drop in nonagricultural wage and salary employment. This measure of payroll employment, which is based on a survey of employers, slipped by about 4500 jobs from October to about 1,957,900 in November. Most of the drop was accounted for by a seasonal decline of 3200 jobs in construction.

Manufacturing hours and earnings showed a slight improvement in November. The factory workweek edged up by one-tenth of an hour to 38.7 hours, while average hourly earnings increased by 6 cents to $8.64. The result of these increases was a gain of $3.18 in average weekly earnings to $334.37 in November, which is 4.9 percent above the year-earlier level. Most industries showed little change in average weekly hours.

Because of these conflicting data, it is not yet clear whether the marked deterioration shown by the November labor force data accurately reflect conditions in the labor markets. A better fix on conditions will probably be possible when December data are produced and when benchmarked data for 1982 become available in February.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity increased seasonally in November. The total number of weeks of unemployment claimed under the UI programs during the month increased by 4.2 percent from October to about 387,100 in November. Claims resulting from unemployment during the reference week, which is an important input to the estimate of total unemployment, increased somewhat more sharply than the whole-month figures.

Most industries showed increases in claims, transportation equipment manufacturing being the major exception.

Benefit payments totaled $27.6 million in November, about $1 million more than in October. Initital claims were also up in November, increasing 5.9 percent from the previous month.

ECONOMIC CONDITIONS AND OUTLOOK

The November data cloud the outlook for the next few months. Certainly, employment will decline and unemployment increase during the winter months because of seasonal factors. Whether the November data are indicative of further cyclical declines or represent the last sharp deterioration resulting from the recession remains to be seen.

Economic forecasts generally call for slow improvement by the spring, with accelerating gains occurring later in the year. While this should bring some improvement in employment, it probably will not be sufficient to bring joblessness down much during 1983, since unemployment generally remains high for some time after the end of a recession.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

NOVEMBER, 1982

RANDALL E. CLARK, ANALYST

A combination of economic and seasonal developments caused a sharp increase in Area unemployment in November. While seasonal changes (employment gains in retail trade and losses in services) canceled each other out, job losses in manufacturing and transportation - caused by economic conditions - caused further deterioration in the Area labor market.

Wage and salaried employment in November 1982 was 590,400, down by 3,200 from the October 1982 total of 593,600. A plant shutdown, the result of lagging sales, put 1,300 workers in machinery manufacturing on layoff for at least three months. The sagging economy also caused layoffs of 700 workers in rail, truck and air transportation. A seasonal decline in services was aggravated by the strike by professional football players. The one bright note was an increase of 1,600 in retail trade employment as Area merchants prepared for the holiday rush.

Wage and salaried employment was down by 31,500 from November 1981 to November 1982. Losses were heaviest in construction-related manufacturing industries, wholesale and retail trade, services and transportation. Losses were smaller in auto assembly, construction and government; after heavy losses in 1980 and 1981, employment in these industries has been leveling off. The shutdowns of the Area's two oil refineries were reflected in the loss of 1,400 jobs in petroleum and coal processing. The printing industry, previously immune to recession, is now showing signs of weakness, with a 12-month loss of 900 jobs.

Total unemployment on a place-of-residence basis was 56,900 in November 1982 for 8.6 per cent of the labor force, compared to 53,200 in October 1982 for 8.0 per cent of the labor force and 46,500 in November 1981 for 6.8 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

Layoffs in air transportation will aggravate a bad situation and push unemployment higher in December 1982. Low sales may cause additional layoffs in manufacturing, and employment will be seasonally lower in construction and services. The weak economy will hold down seasonal hiring by Area merchants. Unemployment is expected to be 8.8 per cent of the labor force in December 1982, compared to 8.6 per cent in November 1982 and 7.2 per cent in December 1981.

Area unemployment may exceed 60,000 for the first time in history in January 1983. Continuing layoffs in manufacturing, transportation, construction and services, along with post-Christmas cutbacks by retailers, will add several thousand to the number of unemployed. The hiring of tax processors by the Federal Government will have only a minor impact on the economy. Unemployment is expected to be 9.5 per cent of the labor force in January 1983, compared to 8.5 per cent in January 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 34,080 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of October 1982. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	15.9
	22-44	67.1
	45 and over	17.0
Sex:	Male	61.3
	Female	38.7
Racial or Ethnic Groups:		
	Black	24.4
	Other Non-White	0.7
	Hispanic	1.8
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	60.8
	Veterans	21.9
	Handicapped	3.4

Source: SMSA 3760, ESARS Table 91, dated 10-31-82.

JOB PLACEMENTS

During November 1982, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 5,324 and job placements totaled 1,380. There were 1,013 veteran referrals in November 1982, with 218 veteran placements. During October 1982, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 5,570 and job placements totaled 1,688. There were 1,038 veteran referrals in October 1982, with 269 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

NOVEMBER, 1982

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate rose from 9.6% in October to 10.2% in November. Continued employment declines in manufacturing, both temporary and indefinite, were the major factors that caused unemployment to increase 5200 over October. Over the year unemployment has increased 20,800, or +22.8%, while 27000 fewer area residents were counted as employed this November compared to November, 1981. There were 300 labor disputants in November, 200 in October, and 200 in November, 1981.

MANUFACTURING

Manufacturing employment declined 3200 over the month. A temporary layoff for inventory reduction at a local auto assembly plant affected 1200 workers and an indefinite layoff affected 500 workers at an Illinois steel foundry. Over the year, manufacturing employment declined 18000. Primary metals, fabricated metals, nonelectrical machinery, and transportation equipment combined to account for 59% of this decrease.

NONMANUFACTURING

Seasonal employment declines from Octover occurred in construction and the hotel, amusement and recreation services industry. Wholesale and retail trade employment increased in anticipation of the Christmas shopping season. Over the year, nonmanufacturing employment has declined 4400 with transportation and local government registering the greatest losses. Construction, services, and federal government employment remained above year ago levels.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were up 2600 in November from October. In the Missouri portion of the SMSA they were up 1500 and in the Illinois portion they were up 1100.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	Aug.	Sept.	Oct.	Nov.
INA	19	12	15	17
Agriculture	45	46	59	81

AVAILABLE JOB OPPORTUNITIES

The occupational percentage distribution of the openings received and filled fiscal year 1982 by the Missouri State Employment Service is as follows:

Occupational Group	Openings Received Percent	Openings Filled Percent
Professional, Technical & Managerial	5.6	2.3
Clerical	15.2	13.2
Sales	21.7	22.1
Processing	1.4	1.6
Machine Trades	3.5	3.2
Bench Work	3.3	3.2
Structural Work	15.9	19.6
Motor Freight & Transportation	3.2	2.0
Packaging & Material Handling	7.9	9.9
Domestic	1.9	2.0
Other Services	18.7	18.8
Other Occupations	1.7	2.1

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

The unemployment rate for December, 1982 is expected to be 10.1%. Unemployment in January normally increases about 20% over the December level. Since weather conditions have a major affect on the January rate, its difficult to project at this time how the new year will start, but an unemployment rate of 11.5% or higher for January, 1983 is quite possible.

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
NOVEMBER, 1982

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force decreased 100 from October to reach 108,300 in November. This is the net result of a 500 drop in employment and a jump of 400 in the number of unemployed.

The number of unemployed persons rose from 8,500 in October to 8,900 in November. During the same 30-day period, the rate of unemployment increased from 7.9 percent of the labor force to 8.2 percent. The rate of unemployment during November, 1981, was calculated at 5.7 percent.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment increased from 86,300 in October to 86,800 in November. Manufacturing employment, estimated at 16,400, remains at the October level. An increase of 100 jobs in the nondurable manufacturing segment was off-set by a corresponding decrease in durable manufacturing industries. During the past year, the number of manufacturing jobs dropped by about 1,900. Nonmanufacturing jobs rose 500 from October to reach 70,400 in November. Nonmanufacturing industries recording significant changes from October to November include: trade, up 500; services, up 100; and government down 100. The substantial jump in trade employment reflects some hiring activity for the Christmas season and jobs generated by new retail establishments at the Battlefield Mall. Since November, 1981, overall nonmanufacturing rose by about 200 jobs.

HOURS AND EARNINGS

The average hourly earnings for manufacturing production and related workers fell from $7.70 in October to $7.66 in November. Average weekly hours inched upward two-tenths of an hour from October to reach 39.1 hours in November. Average weekly earnings, estimated at $299.51 for November, dropped two cents from October.

During November, 1981, the average hourly earnings amounted to $7.56, weekly hours worked averaged 37.3 and average weekly earnings came to $281.99.

Continued from Page 14

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment is expected to remain near the current level during December. A decrease in the number of manufacturing jobs should be off-set by hiring activity fostered by Christmas trade.

The number of unemployed persons is expected to rise slightly during December. The rate of unemployment will probably inch upward two or three-tenths of a percentage point.

2/28/83 S4530-3 A

MISSOURI SUMMARY MANPOWER REVIEW

BILL NIBLACK, LABOR ECONOMIST TOM HAMMOND, ANALYST DATA MONTH: DECEMBER, 1982

Unemployment in Missouri increased seasonally in December, climbing by 7000 to 221,900. The unemployment rate edged up three-tenths of a percentage point to 9.8 percent.

Employment continued to slide, but part of the drop was the usual seasonal decline experienced in December. Total employment fell by 25,500 to 2,033,600 and is now 97,100 below the year-earlier level. As usual, the drop in nonagricultural wage and salary employment was less pronounced, falling by 11,300 jobs to 1,944,800. The number of nonfarm payroll jobs in Missouri establishments is now estimated at 22,700 below the year-earlier level.

Almost all the December drop in payroll employment was in the nonmanufacturing industries, primarily construction (down by 6100 jobs) and services (down by 3800 jobs). Retail trade showed a seasonal pickup of 1800 jobs, considerably smaller than the usual Christmas seasonal gain. Compared to a year ago, job losses have been concentrated in the durable goods manufacturing industries, especially machinery; primary metals; and electric and electronic equipment. Sizeable declines also occurred in wholesale trade and state and local government. The two industries which had suffered most in the earlier phases of the two nearly back-to-back recessions -- construction and motor vehicles manufacturing -- have shown some gains in the past year.

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments. Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

The factory workweek continued to edge up in December, increasing three-tenths of an hour to 38.9 hours. Among the industries reporting longer workweeks were furniture and fixtures, the primary and fabricated metal products industries, textile and apparel, printing and publishing, and chemicals. Decreased average weekly hours were noted in motor vehicles and equipment and food products.

Average hourly earnings increased two cents from November to $8.63 in December, while average weekly earnings went up $3.36 to $335.71. December weekly earnings were 4.3 percent above the level of December 1981.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity increased in December, largely because of seasonal conditions. The total number of weeks of unemployment claimed under the various unemployment insurance programs rose by 14.4 percent to about 443,000 in December. Most industries experienced increased claims, the major exception being leather manufacturing. Benefit payments were up by $4.2 million to $31.8 million.

The number of claimants in the reference week dropped sharply from November to 81,000 in December. The drop was the result of atypical reference weeks -- the November reference week was unusually high while the December period was low.

ECONOMIC CONDITIONS AND OUTLOOK

Missouri unemployment always increases sharply in January, but the relatively mild weather which has prevailed so far may help limit this year's increase.

Evidence is mounting that economic activity is now picking up. Housing, for example, seems to be experiencing a revival. The nation's output of goods and services fell sharply in the final quarter of 1982, but much of the drop can be traced to inventory liquidation, which took place at a record pace. With inventories now leaner, increased sales will be translated into increased production relatively quickly.

National employment and unemployment were about the same in December as in November. The seasonally adjusted unemployment rate was 10.8 percent in December compared to November's revised rate of 10.7 percent.

Although there are a few forecasters who are predicting a vigorous recovery, most seem to think that recovery will start slowly. Economic growth will probably not be rapid enough to start reducing unemployment before late 1983.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

DECEMBER, 1982

RANDALL E. CLARK, ANALYST

The Area labor market showed almost no real change from November to December. The only major changes in employment totals were seasonal, with losses in construction and services and gains in retail trade. Unemployment was virtually unchanged. Over the 12 months from December 1981 to December 1982, the labor market showed a major decline, with unemployment higher despite a much smaller labor force.

Wage and salaried employment in December 1982 was 586,700, down by 3,600 from the November 1982 total of 590,300. Losses of 2,200 jobs in construction and 1,600 jobs in services were seasonal in nature - both industries always decline as the weather turns cold - but they aggravated a situation already bad. Area merchants added an extra 1,000 employees for the Christmas rush; lagging sales caused by the economy prevented a larger gain.

Wage and salaried employment dropped by 26,100 from December 1981 to December 1982. Losses were heaviest in retail trade, manufacturing and services. Manufacturing losses were concentrated in construction-related durable goods - primary and fabricated metals, machinery and electrical equipment - and in oil refining. Losses in retail trade were distributed throughout the industry. Hotels, business services and consulting engineering firms accounted for most of the loss in services. The one bright spot was the auto assembly industry, with a 12-month gain of 5,700 jobs. Increases in new car sales have broken the pattern of temporary layoffs that prevailed in late 1981 and early 1982 in the industry.

Total unemployment on a place-of-residence basis was 57,100 in December 1982 for 8.7 per cent of the labor force, compared to 57,200 in November 1982 for 8.6 per cent of the labor force and 48,600 in December 1981 for 7.2 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

The Area unemployment rate is expected to hit its highest level for the recession in January 1983. Layoffs in retail trade, air transportation and electrical equipment manufacturing will put several thousand people out of work. Seasonal losses will continue in construction and services. The only bright note will be the hiring of additional tax processors by the federal government. Unemployment is expected to be 9.4 percent of the labor force in January 1983, compared to 8.7 per cent in December 1982 and 8.5 per cent in January 1982.

The labor market is expected to show some improvement in February 1983. 1,000 workers in machinery manufacturing should be recalled after a layoff of three months. If weather permits, construction should also begin to grow. However, there will be additional layoffs in metal manufacturing and retail trade. Seasonal hiring of federal tax processors will continue. Unemployment is expected to be 9.2 per cent of the labor force in February 1983, compared to 8.3 per cent in February 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 34,795 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of December 1982. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics	Per Cent
Age: Under 22	16.2
22-44	66.6
45 and over	17.2
Sex: Male	63.1
Female	36.9
Racial or Ethnic Groups:	
Black	24.5
Other Non-White	0.9
Hispanic	2.0
Miscellaneous Characteristics	Per Cent
Unemployment Insurance Claimants	64.5
Veterans	22.9
Handicapped	3.3

Source: SMSA 3760, ESARS Table 91, dated 12-31-82.

JOB PLACEMENT

During December 1982, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 5,423 and job placements totaled 1,149. There were 1,112 veteran referrals in December 1982, with 188 veteran placements. During November 1982, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 5,324 and job placements totaled 1,380. There were 1,013 veteran referrals in November 1982, with 218 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

DECEMBER, 1982

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA rate rose from 10.2% in November to 10.4% in December. Employment, which normally increases from November to December, continued to decline and unemployment, which normally remains level during the end of the year, continued to increase. Over the year, unemployment has increased by 28.0% and employment has declined by 3.8%. Employment declines have occurred in almost all major industries since December 1981 and the recession has also affected most of the occupations in the local labor force. There were 400 labor disputants in December, 300 in November and 100 in December 1981.

MANUFACTURING

Total manufacturing employment remained stable in December from November. Motor vehicle employment increased 500 as workers were recalled from a temporary lay off at one of the area assembly plants. Primary metals, fabricated metals, and non-electrical machinery all continued to decline. Over the year, manufacturing has declined by 14900. Aircraft and beverages are the only two manufacturing industries to register improved employment levels over December 1981.

NONMANUFACTURING

Seasonal employment declines occurred in mining, construction and services. Employment increased by 2100 in retail trade as temporary Christmas season workers were added to the payrolls. Over the year, nonmanufacturing employment is down 8100. Retail trade employment declined 1200 as Christmas sales at most retail establishments did not show significant improvement over 1981 levels. The recession and truck deregulation continue to affect transportation, -2800, and reduced or stagnant revenues has caused state and local government employment to decline by 4700.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were up 3500 in December from November. In the Missouri portion of the SMSA they were up 1800 and in the Illinois portion they were up 1700.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	Sept.	Oct.	Nov.	Dec.
INA	12	15	17	5
Agriculture	46	59	81	99
Mining	46	59	50	61

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
DECEMBER, 1982

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force decreased from 108,300 in November to 107,800 in December. During the 30-day period, employment fell 600 while unemployment edged upward 100.

The number of unemployed persons rose from 8,900 in November to 9,000 in December. The rate of unemployment moved from 8.3 percent of the labor force to 8.4 percent. Increased claims activity for Unemployment Insurance occurred among workers in manufacturing and construction.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment inched upward from 86,900 in November to reach 87,000 in December. A loss of 300 manufacturing jobs was more than off-set by increased employment in the nonmanufacturing sector. Most of the loss in manufacturing employment took place in the durable goods manufacturing segment. Since December, 1981, manufacturing employment decreased by approximately 1,500. Nonmanufacturing employment, estimated at 70,800, rose 600 since November. Nonmanufacturing industries recording significant employment changes since November include: construction, down 100; trade, up 200; and services, up 300. The increase in trade employment is seasonal and is due mostly to extra help hired for Christmas. Included in the jump for services employment are jobs at the new Springfield Community Hospital.

HOURS AND EARNINGS

Average hourly earnings for manufacturing production and related workers moved upward from $7.66 in November to $7.71 in December. Average weekly hours rose six-tenths of a percentage point from November to reach 40.0 hours in December.

During December, 1981, the average hourly earnings came to $7.59, weekly hours worked averaged 38.8 and average weekly earnings amounted to $294.49.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Overall payrolled employment will probably show a slight decline in January. Anticipated call-backs in the manufacturing sector will be more than off-set by a seasonal reduction in nonmanufacturing jobs.

The rate of unemployment is expected to rise two or three-tenths of a percentage point.

MISSOURI SUMMARY MANPOWER REVIEW

BILL NIBLACK, LABOR ECONOMIST **TOM HAMMOND, ANALYST** **DATA MONTH: JANUARY, 1983**

Evidence that a national economic recovery has begun is now strong, although the recovery does not yet appear to have manifested itself in the Missouri labor markets.

Unemployment increased seasonally in January, climbing by 1.5 percentage points to 10.9 percent. This represented 240,900 jobless Missourians, the largest number since current records began being kept in 1970. This high level of unemployment is primarily the result of the normally sharp seasonal increases in unemployment being superimposed on the already high cyclical level of unemployment.

The same combination of seasonal and cyclical effects are also evident in the employment figures. Total employment dropped to 1,969,400 in January, the lowest level since early 1977. This represents a drop of about 75,000 from the year-earlier figure. The decline from December is probably exaggerated by the fact that the recently-benchmarked December total employment figure appears to be an aberration. Benchmarking is performed annually by the Bureau of Labor Statistics so that all states will be on the same basis for Federal revenue sharing programs. Large revisions to individual monthly data sometimes result from this process.

Nonagricultural wage and salary employment data, which are based on a survey of employers, show a more normal seasonal drop of about 39,000 jobs between December and January. The January estimate is 1,869,200 jobs, about 21,800

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments. Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

fewer than in January 1982. The December-to-January drop in nonfarm payroll employment was primarily the result of seasonal declines in construction, retail trade, and services. State and local government employment also declined, while only small drops were noted in manufacturing industries.

The factory workweek remained about the same in January as in December and was substantially higher than a year ago. Average weekly hours of manufacturing production workers were put at 39.0 in both December and January, compared to 38.1 in January 1982. The same pattern was evident in many industries, the main exceptions being iron and steel foundries, fabricated metal products, nonelectrical machinery, some food products industries, textile and apparel, printing and publishing, and leather products.

Average earnings were up slightly in January, hourly earnings edging up 6 cents to $8.68, while weekly earnings went up $2.34 to $338.52. This figure is 7 percent above the year-earlier level.

ANNUAL AVERAGE DATA

Missouri labor force data for the period 1970-1982 have recently been benchmarked by the U.S. Bureau of Labor Statistics. Based on these revised state data, area data are now being benchmarked, with complete historical series to be available in the spring.

The labor force annual averages -- derived from the Current Population Survey -- do not differ significantly from those published earlier. Data for the past four years, shown below with nonagricultural wage and salary employment data, are illustrative of the effects of the two recent recessions on the Missouri labor markets.

	1979	1980	1981	1982
Civilian Labor Force	2,288,000	2,309,000	2,319,000	2,311,000
Total Employment	2,184,000	2,142,000	2,141,000	2,097,000
Unemployment	104,000	167,000	179,000	214,000
Unemployment Rate	4.5%	7.2%	7.7%	9.2%
Nonagricultural Wage & Salary Employment	2,011,100	1,969,800	1,956,300	1,916,200
Manufacturing	464,400	437,000	427,500	407,300
Nonmanufacturing	1,546,700	1,532,800	1,528,800	1,508,900

Since the first recession began in 1980, there has been essentially no net change in the labor force -- perhaps indicative of discouragement among unemployed workers and potential entrants to the labor force. Total employment has fallen, averaging 87,000 fewer in 1982 than in 1979, while the number of unemployed people has more than doubled in the same period.

Nonagricultural wage and salary employment has dropped slightly more than total employment, falling by nearly 95,000 jobs, with about three-fifths of the drop occurring in the manufacturing industries.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity increased seasonally in January. Indeed, the increase in claims during the whole month appears to have been less than typical of January because of the mild weather prevailing this year. Total weeks of unemployment claimed under unemployment insurance during the month increased by 11.2 percent from December to about 492,000 in January, while benefit payments were up $3.2 million to $35.1 million.

Reference week measures of unemployment insurance activity were up more sharply from December than total-month figures. The total number of claimants in the reference week increased by 39.7 percent from December to 113,100 in January. Construction, services, and several manufacturing industries including apparel, machinery, electrical equipment, and transportation equipment led the increases.

ECONOMIC CONDITIONS AND OUTLOOK

Evidence is now amassing that an economic recovery has begun. The most persuasive piece of evidence is the strong increase in the index of industrial production -- the most comprehensive monthly measure of economic output -- which occurred in January. There has been only one previous substantial gain in this index since August 1981, shortly after the recession began. Output of the nation's factories, utilities, and mines dropped about 12 percent during the recession.

Among the other economic measures showing marked improvement was housing starts, which jumped by about 36 percent in January, the largest one-month increase on record.

National unemployment dropped unexpectedly in January. The seasonally adjusted civilian unemployment rate fell from 10.8 to 10.4 percent. Because such a drop is not expected at this phase of the business cycle and was not accompanied by an increase in employment, there is some doubt about its meaningfulness. Although some rebound in unemployment might occur in later months, it does appear that the long upward climb of unemployment and the drop in employment has halted.

Statistical problems cloud the movements in Missouri labor market variables for recent months, but the trend of employment has been down. Unemployment appears to be leveling off, except for the winter seasonal increases. The one bright spot so far is that average weekly hours is holding up at levels well above a year ago. Increases in the workweek usually precede increases in employment.

After a further seasonal increase in unemployment in February, Missouri data should show substantial seasonal improvement in the spring. Underlying improvement in employment may begin to be felt about that time as well. Unemployment frequently increases in the early months of a recovery, partly because of the return of workers to the labor force when employment prospects brighten. With the state's labor force having contracted during the recession, there may be substantial re-entry to the labor force once recovery is well-established, keeping upward pressure on unemployment.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

JANUARY, 1983

RANDALL E. CLARK, ANALYST

Seasonal job losses accounted for most of a substantial rise in unemployment in January 1983. Almost 90 per cent of the 11,900 jobs lost from December to January were the result of seasonal cutbacks by employers. These seasonal layoffs pushed Area unemployment to its highest level since the beginning of local unemployment estimates.

Wage and salaried employment in January 1982 was 581,800, down by 11,900 from the December 1982 total of 593,700. Job losses were heaviest in retail trade as merchants laid off the extra workers hired for the Christmas rush. In addition, 600 retail employees lost their jobs because of the shutdown of a major chain of discount stores. Cold weather caused the layoff of 1,700 workers in construction. The semester break at Area schools caused the temporary layoff of 1,200 local government employees. Seasonal layoffs also occurred in services, transportation and manufacturing. 700 truck assemblers were idled by a short-term layoff. No industries showed higher employment from December to January.

Wage and salaried employment fell by 21,500 from January 1982 to January 1983. Losses were heaviest in wholesale and retail trade, manufacturing, services and transportation. Losses were less severe in construction and durable goods manufacturing (in fact, the only industries showing higher employment were in durable goods manufacturing); since these two industries have traditionally anticipated swings in the economy, their relative strength could indicate the beginning of a recovery by the economy.

Total unemployment on a place-of-residence basis was 60,600 in January 1982 for 9.3 per cent of the labor force, compared to 54,900 in December 1982 for 8.2 per cent of the labor force and 53,300 in January 1982 for 8.0 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

It now appears that temporary layoffs will cause an additional increase in Area unemployment in February 1983. These layoffs will be concentrated in durable goods manufacturing, and will probably last for several months. Mild February weather, however, should bring higher employment in construction and services. Government employment will also be higher as schools begin the spring semester and the federal government hires additional tax processors. Unemployment is expected to be 9.7 per cent of the labor force in February 1983, compared to 9.3 per cent in January 1983 and 8.2 per cent in February 1982.

Unemployment should begin to drop in March 1983. With construction starts on the increase, employment in construction

Continued on Page 8

Continued from Page 7

could show its largest monthly gain in several years. Some 2,500 auto assemblers will be on temporary layoff, but this layoff will be caused by a plant refurbishing rather than by the economy. Another auto assembly plant will hire 500 additional workers to handle increased demand. Employment gains should continue in construction and services. Unemployment is expected to be 9.0 per cent of the labor force, compared to 8.6 per cent in March 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 38,663 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of January 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	15.5
	22-44	67.5
	45 and over	17.0
Sex:	Male	63.3
	Female	36.7
Racial or Ethnic Group		
	Black	24.6
	Other Non-White	0.9
	Hispanic	1.9
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	63.7
	Veterans	22.1
	Handicapped	3.1

JOB PLACEMENTS

During January 1983, referrals to jobs by Missouri Job Service office in the Kansas City Area totaled 6,792 and job placements totaled 1,442. There were 1308 veteran referrals in January 1983, with 200 veteran placements. During December 1982, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 5,423 and job placements 1,149. There were 1,112 veteran referrals in December 1982, with 188 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

JANUARY, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate rose from 10.2% in December, 1982 to 11.4% in January, 1983. The number of unemployed normally rises about 20% from December to January, but due to the mild weather conditions this winter the increase from month to month was only 8.7%, 115200 to 125200. The decline of 46900 over the month in total employment is due to seasonal employment declines and a federal benchmarking process that is responsible for an overestimation of employment in December, 1982. This overestimation will be corrected at a later date. The nonagricultural wage and salary data give a better indication of the actual monthly employment change. Over the year, unemployment has increased 14.1% and employment has declined 2.4%. There were 2100 labor disputants in January, 400 in December, 1982 and 0 in January, 1982.

MANUFACTURING

Manufacturing employment declined 2000 in January from December. The permanent shut down of an auto parts manufacturer affected 600 workers in the motor vehicle industry. Employment declines continued in primary and fabricated metals. Lumber and furniture, which normally declines over the month, increased 200 due to the improved housing market activity. Over the year, manufacturing employment declined 13200. The majority of the job losses continue to be in the durable goods sector, - 11,300.

NONMANUFACTURING

Seasonal employment declines occurred in trade, government and services. Construction employment also declined, but due to the mild weather conditions this year's decline was less than normal. Over the year, nonmanufacturing employment declined 4800. Industries most severely affected by the recession continue to be transportation, trade, and state and local government.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were up 2900 in January from December, 1982. In the Missouri portion of the SMSA they were up 1800 and in the Illinois portion they were up 1100.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	Oct.	Nov.	Dec.	Jan. '83
INA	15	17	5	13
Agriculture	59	81	99	202

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
JANUARY, 1983
LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

During 1982, the Springfield SMSA labor force averaged approximately 109,000. The number of unemployed and the rate of unemployment averaged 8,000 and 7.4 percent respectively.

The January, 1983, labor force, estimated at 105,600, shows an increase of 600 from January, 1982. The rate of unemployment rose from 7.3 percent in January, 1982, to 9.0 percent in January, 1983. The current rate reflects a seasonal increase from the December, 1982, rate which was calculated at 7.8 percent of the labor force.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment plunged from 88,400 in December, 1982, to 85,600 in January, 1983. This seasonal decrease all took place within the nonmanufacturing sector. The number of manufacturing jobs, estimated at 16,700, shows no change from December. Nonmanufacturing jobs fell from 71,700 in December to 68,900 in January. Nonmanufacturing industries recording significant changes from December include: mining and construction, down 400; transportation and utilities, down 100; trade, down 1,500; services, down 100; and government, down 700. The sizeable drop in trade employment occurred as the Christmas season ended.

Since January, 1982, nonmanufacturing employment shows a net increase of 1,600. The services industry performed the best with a gain of 1,000 jobs.

HOURS AND EARNINGS

Average hourly earnings of manufacturing production and related workers decreased from $7.79 in December to $7.73 in January. A good portion of the drop results from less overtime worked at premium pay. Average weekly hours worked fell from 40.4 in December to 39.9 in January. Average weekly earnings, estimated at $308.43, dropped $6.29 from December.

During January, 1982, average hourly earnings amounted to $7.59, weekly hours worked averaged 39.3 and average weekly earnings came to $298.29.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

During February, payrolled employment should record a slight increase. Both sectors, manufacturing and nonmanufacturing, are expected to post employment gains.

The number of unemployed persons is expected to show very little change during February. The rate of unemployment should remain near the current level or possibly drop slightly.

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST **TOM HAMMOND, ANALYST** **DATA MONTH: FEBRUARY, 1983**

Missouri unemployment increased seasonally in February, climbing by about 8400 to a total of 251,900. The unemployment rate went up three-tenths of a percentage point to 11.3 percent, not seasonally adjusted. Such an increase is typical of February, with construction and retail trade, frequently being affected.

Total employment edged up somewhat in February, increasing by 13,800 to 1,981,800. It is perhaps too early to tell whether this movement is the result of improving economic conditions, since nonfarm payroll employment, as estimated from a sample of employers, did not show as large an increase. Nonagricultural wage and salary employment increased by only 2000 jobs to 1,869,500. The increase came primarily in state and local government, where a seasonal gain of 6900 jobs raised employment to 261,600, about the level prevailing in the last months of 1982. Employment in motor vehicles and equipment manufacturing was up by 800 jobs, to 20,800, while construction employment fell by 1700 to 61,700 and retail trade dropped by 3800 to 312,600. No other substantial changes were noted in any industry groups.

Compared to year-earlier figures, total employment has fallen by 58,300, while nonagricultural wage and salary employment dropped by 16,200 jobs.

The factory workweek showed little change between January and February, and average earnings edged up slightly. Average weekly hours of manufacturing production workers dipped by a tenth of an hour to 39.0 hours, while average hourly

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

earnings increased by 7 cents to $8.75. Resulting average weekly earnings of $341.25 represented a gain of $1.86 from January and a 7 percent increase from the year-earlier period.

UNEMPLOYMENT INSURANCE ACTIVITY

Unemployment insurance activity decreased somewhat in February. The total number of weeks of unemployment claimed under the various programs dropped by about 5 percent from January to 468,100 while benefit payments fell by $874,000 to $34,215,000. The number of initial claims dropped sharply during the month, decreasing by 39 percent to 55,900. This reduction in new unemployment may reflect improving economic conditions and should indicate decreased levels of unemployment in upcoming months.

ECONOMIC CONDITIONS AND OUTLOOK

Evidence of economic improvement continues to mount. The most comprehensive measure so far is the government's advance estimate of real gross national product, which shows the nation's output of goods and services increasing at a 4.4 percent rate in the first quarter of 1983, after adjustment for inflation.

National unemployment remained about unchanged in February, after seasonal adjustment, with 10.4 percent of the civilian labor force being unemployed both in January and in February. These figures represent a significant drop from December, when the unemployment rate was 10.8 percent. Total civilian employment has shown little change in the last several months. Nonfarm payroll employment slipped a little in February but remained above the level of December.

Substantial improvement in Missouri employment and unemployment conditions usually occurs in March and April. As economic conditions continue to improve, underlying economic improvement might be seen in employment and unemployment, in addition to the usual seasonal changes.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

FEBRUARY, 1983

RANDALL E. CLARK, ANALYST

Seasonal job losses in retail trade and construction pushed the area unemployment rate to a post-Depression high in February 1983. Employment gains in manufacturing and government were not enough to prevent a small increase over the January rate. However, it appears that the February statistics will mark the low point in the current slump in the economy.

Wage and salaried employment in February 1983 was 579,600, down by 1,900 from the January 1983 total of 581,500. Losses were concentrated in retail trade, with area merchants laying off the remainder of the workers they hired for the Christmas rush, and in construction, as contractors waited for the beginning of the spring construction season before beginning new projects. An increase of 700 in manufacturing employment was caused by the recall of some 700 light truck assemblers after a short layoff. 400 tax processors were added to federal government employment rolls, and 1,200 school employees returned to work after the semester break in January.

Wage and salaried employment fell by 21,900 from February 1982 to February 1983. 12-month losses were heaviest in manufacturing, wholesale and retail trade, services and transportation. Durable goods manufacturing and construction accounted for a relatively small portion of the loss; this relatively small loss is significant in light of the fact that these two industries have traditionally led the way when the labor market has begun a recovery from recession.

Total unemployment on a place-of-residence basis was 62,300 in February 1983 for 9.5 per cent of the labor force, compared to 61,300 in January 1983 for 9.4 per cent of the labor force and 55,100 in February 1982 for 8.2 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

Unemployment is expected to begin dropping in March 1983. Some workers will be recalled from layoff in metal and machinery manufacturing. Employment will begin to increase in construction as contractors start new projects. Employment should be seasonally higher in services, retail trade and federal government. Some 2,800 auto assembly workers will be temporarily laid off as one area plant is closed for retooling of an assembly line; they should be recalled in May. Unemployment is expected to be 9.0 per cent of the labor force in March 1983, compared to 9.5 per cent in February 1983 and 8.6 per cent in March 1982.

The area labor market should continue to improve in April 1983. Manufacturing, construction, retail trade, services and federal government should all show higher employment. Unemployment is expected to be 8.5 per cent of the labor force in April 1983, compared to 8.2 per cent in April 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 39,469 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of February 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	15.1
	22-44	67.6
	45 and over	17.3
Sex:	Male	63.7
	Female	36.3
Racial or Ethnic Group		
	Black	24.3
	Other Non-White	0.9
	Hispanic	2.0
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	63.5
	Veterans	22.3
	Handicapped	3.0

JOB PLACEMENTS

During February 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 5,451 and job placements totaled 1,504. There were 994 veteran referrals in February 1983, with 201 veteran placements. During January 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 6,792 and job placements 1,442. There were 1,308 veteran referrals in January 1983, with 200 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

FEBRUARY, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate stood at 11.8% for February, 11.5% in January, and 10.3% in February, 1982. The number of area residents in the local labor force increased over the month by 3300 as unemployment rose 3800 while total employment declined 500. Despite the mild winter weather, the unemployment rate continued to increase because most area employers are either holding their employment levels constant or are still reducing them. Planned major employment recalls in manufacturing will not take place until this summer and nonmanufacturing employment does not normally begin its seasonal increases until March of each year. Over the year, unemployment has increased 15900 and employment has declined 21400. There were 100 labor disputants in February, 2100 in January, and 100 in February, 1982.

MANUFACTURING

Manufacturing employment declined 800 over the month. The primary and fabricated metal industries continued to lay off workers declining 400 employees each. Some small gains were reported in nonelectrical machinery, electronic equipment, motor vehicles, apparel, and other nondurable goods. All other manufacturing industries were unchanged or reported small declines. Over the year, manufacturing declined 12900, or -5.8%. Most of the major industries continue to report job cut backs since 1982.

NONMANUFACTURING

Nonmanufacturing employment was 1200 lower over the month with seasonal declines occurring in construction and trade. Government employment increased 4200 as public schools recalled laid off non-teaching personnel after the Christmas break. The non-railroad transportation industry was up 400 as trucking and airlines increased their employment levels. Over the year, nonmanufacturing declined 700. Lower employment levels continued in transportation (-1400), trade (-1400), and government (-2400). Service employment increased 2200 and mild winter weather caused construction employment to remain above year ago levels (+3000).

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 800 in February from January. In the Missouri portion of the SMSA they were down 400 and in the Illinois portion they were down 400.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
FEBRUARY, 1983

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force increased from 105,700 in January to 107,900 in February. During the 30-day period, the number of unemployed workers rose 200 to reach 9,800. However, due to the expanding labor force, the rate of unemployment inched downward from 9.1 percent in January to 9.0 percent in February.

During February, 1982, the number of unemployed persons amounted to 7,700 and the rate of unemployment was calculated at 7.3 percent.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment recorded a jump of 1,300 from January to February. Manufacturing jobs increased 400 to reach 17,000 in February. During the same period, nonmanufacturing jobs rose from 69,000 to 69,900.

Within the manufacturing segment, gains occurred in both durable and nondurable goods manufacturing industries. The majority of the manufacturing workers recalled from lay-off during the month were engaged in durable goods manufacturing.

Nonmanufacturing jobs rose from 69,000 in January to 69,900 in February. Most of this jump was in state and local government and reflects changes in student employment.

Compared to February, 1982, manufacturing jobs show a decrease of 1,400, nonmanufacturing jobs show a jump of 2,200 and overall payrolled jobs recorded a net gain of 800.

HOURS AND EARNINGS

Average hourly earnings for manufacturing production and related workers moved upward from $7.74 in January to $7.81 in February. Average weekly hours worked rose 1.3 hours from January to reach 41.2 in February. Average weekly earnings during February amounted to $321.77.

During February, 1982, the average hourly earnings came to $7.50, weekly hours worked averaged 40.1 and average weekly earnings were calculated at $300.75.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Overall payrolled employment will probably show a slight increase during March. This will result from anticipated call-backs in the manufacturing sector and a seasonal increase in nonmanufacturing jobs.

The number of unemployed persons is expected to remain near the current level or possibly drop slightly. The rate of unemployment should record a drop of two or three tenths of a percentage point.

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST TOM HAMMOND, ANALYST DATA MONTH: MARCH, 1983

Missouri total employment climbed sharply and the unemployment rate dropped eight-tenths of a percentage point in March, as seasonal changes began to be translated into improving labor market conditions.

Total employment climbed by 64,100 between February and March, the largest one-month increase in nearly six years. Even with this gain, though, total employment of 2,044,700 is still 27,600 below the year-earlier level.

Employment grew by a much larger amount than the drop in unemployment, as the labor force increased by 52,600 to 2,287,800, nearly the same level as a year ago. The growth in labor force and employment appear to be greater than the usual seasonal amount, but the drop in unemployment -- down by 11,500 to 243,100 -- is perhaps smaller than usual for March. The unemployment rate dropped to 10.6 percent in March from February's 11.4 percent. A growing labor force with stable or even rising unemployment is characteristic of the early phases of recovery, as discouraged workers re-enter the labor force more rapidly than growing employment can absorb them.

The fairly rosy picture that emerges from the labor force data should be tempered somewhat by the nonagricultural wage and salary data, where the gains were more modest. The total number of nonfarm payroll jobs is estimated to have grown by 14,500 between February and March to 1,884,400, a figure which is still more than 25,000 below the year-earlier level.

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

Manufacturing employment slipped back slightly in March, primarily the result of a drop of 1500 in the motor vehicles and equipment industry, where employment is now estimated at 19,000. Employment changes in other manufacturing industries were smaller, with gains in some industries tending to offset losses in others. Nonmanufacturing employment increased by 15,500, as seasonal gains in construction (up by 5800 jobs to 67,500), retail trade, and services pushed the total upward. The overall gain in payroll employment appears to be less than the usual March seasonal increase.

Hours and earnings of manufacturing production workers showed little overall change in March. The factory workweek edged up one-tenth of an hour to 39.0, while average hourly earnings slipped back by 2 cents to $8.73. The net effect on average weekly earnings was an increase of 9 cents to $340.47, which is 5.4 percent higher than in March 1982. Although the overall figure for average weekly hours showed little change, there were some changes in individual industries. Among the industries with longer average workweeks were lumber and wood products, nonelectrical machinery, electric and electronic equipment, motor vehicles and equipment, instruments, and printing and publishing. Those reporting shorter workweeks included furniture and fixtures, primary metals, fabricated metal products, food, and leather products.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity increased slightly in March, at least in part due to the month being longer than February. The total number of weeks of unemployment claimed under the various UI programs increased by 4.1 percent to 487,200, while total benefit payments increased $1.8 million to $36 million. The number of new claims filed during the month was about the same as in February – 56,000.

The number of claimants in the mid-month reference week was 102,900, an increase of 14.2 percent from the year-earlier figure.

ECONOMIC CONDITIONS AND OUTLOOK

National employment and unemployment remained about the same in March as in January and February. The seasonally adjusted civilian unemployment rate was 10.3 percent in March, compared to 10.4 percent in January and February.

Total employment has remained at about the same level since last October, after seasonal adjustment. The decrease in unemployment that occurred in January resulted primarily from a drop in the labor force rather than an increase in employment. Whether this movement in the labor force actually represented people leaving the labor force or a statistical fluke is not clear. Some analysts expect a "correction" in which the labor force and unemployment would jump back up by at least the amount they dropped in January. Such a sudden upswing in unemployment would not necessarily represent deteriorating economic conditions. Rather, it could represent perceived improvement in the economy, as workers became encouraged about job prospects and actively began to seek work again.

The seasonal improvement in the Missouri labor market should be even more pronounced in April than in March. May should also show some seasonal improvement, with the summer runup in unemployment taking place primarily in June.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

MARCH, 1983

RANDALL E. CLARK, ANALYST

The area labor market showed some improvement in March 1983. Several nonmanufacturing industries showed seasonal employment gains, and some laid off workers were recalled to their jobs in manufacturing. A layoff by one automobile manufacturer prevented a larger employment gain, but even this layoff represented good news: the plant was closed to allow retooling to build a new product, which should generate additional jobs.

Wage and salaried employment in March 1983 was 583,700, up by 3,600 from the February 1983 total of 580,100. With the approach of spring, services, construction and retail trade were all more active and gained in employment. 800 employees in machinery manufacturing were recalled to their jobs after a four-month layoff. Another 700 vehicles assemblers were also recalled, but 2,500 auto assemblers were laid off for the retooling at one plant.

Wage and salaried employment fell by 24,900 from March 1982 to March 1983. Losses were most heavily concentrated in durable goods manufacturing, wholesale and retail trade, services and transportation; heavy layoffs occurred in all these industries during the last half of 1982. Bad weather was a factor in the 12-month loss of 1,300 jobs in construction; had the weather in March 1983 been better, the industry would probably have shown a gain in employment from March 1982. Losses in nondurable goods manufacturing reflected the 1982 closings of the area's two oil refineries, along with lowered demand for printed material and agricultural chemicals.

Total unemployment on a place-of-residence basis was 62,300 in March 1983 for 9.3 per cent of the labor force, compared to 63,100 in February 1983 for 9.6 per cent of the labor force and 58,100 in March 1982 for 8.6 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

Seasonal factors should produce higher employment in April 1983, but the gains will be less than usual because of bad weather. Construction and services depend on good weather for their spring upturn, and April's rain and snow will postpone some of the gain until May. Manufacturing and transportation are expected to show small employment gains, and wholesale and retail trade should also show some improvement. Unemployment is expected to be 9.0 per cent of the labor force compared to 9.3 per cent in March 1983 and 8.2 per cent in April 1982.

The area labor market should improve substantially in May 1983. Several thousand auto workers are expected to return to work as one area assembly plant begins production of a new product line. Construction and services will show strong employment gains as the weather improves. A resurgence in construction should also produce higher employment in manufacturing and transportation. Unemployment is expected to be 8.1 per cent of the labor force in May 1983, compared to 7.5 per cent in May 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 39,290 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of March 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	16.0
	22-44	66.5
	45 and over	17.5
Sex:	Male	63.5
	Female	36.5
Racial or Ethnic Group		
	Black	24.6
	Other Non-White	1.1
	Hispanic	2.1
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	62.3
	Veterans	22.8
	Handicapped	3.1

SOURCE: SMSA 3760, ESARS Table 91, dated 03-31-83.

JOB PLACEMENTS

During March 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 6,567 and job placements totaled 2,033. There were 1,099 veteran referrals in March 1983, with 253 veteran placements. During February 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 5,451 and job placements 1,504. There were 994 veteran referrals in February 1983, with 201 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

MARCH, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The recall of a small number of the workers who were previously laid off in manufacturing combined with seasonal employment increases in nonmanufacturing caused the St. Louis area unemployment rate to decline from 11.9% in February to 10.8% in March. The number of area unemployed residents declines 9400, or -7.2%. Increased business and consumer confidence about the economy along with good construction activity and strong demand for St. Louis area produced motor vehicles have all contributed to the unemployment rate decline. Over the year, unemployment increased 14600 and total employment declined 5800. The unemployment rate in March, 1982 was 9.6%. There were 100 labor disputants in March and February and 300 in March, 1982.

MANUFACTURING

Manufacturing employment increased 1900 over the month. In motor vehicles, 900 workers were recalled at a local assembly plant. Small employment increases occurred in stone, clay and glass, primary metals, fabricated metals, aircraft, and beverages. A seasonal employment increase of 300 occurred in lumber and furniture. Over the year, manufacturing employment declined 9200. Industries that have declined the most in number of workers are primary metals (-2900), fabricated metals (-1900), and non electrical machinery (-1700).

NONMANUFACTURING

Seasonal employment increases in construction, trade, real estate, and services caused nonmanufacturing to rise 3700 over February. Over the year, nonmanufacturing employment declined 9700. Services and federal government are the only two major industries to register employment increases.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 5600 in March from February. In the Missouri portion of the SMSA they were down 4000 and in the Illinois portion they were down 1600.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	Dec.	Jan. '83	Feb.	Mar.

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
MARCH, 1983
LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force increased from 107,600 in February to 110,200 in March. During the same period, the number of unemployed workers decreased 500 to reach 9,300. The rate of unemployment dropped from 9.1 percent of the labor force in February to 8.5 percent in March.

During March, 1982, there were 7,800 person unemployed, and the rate of unemployment stood at 7.3 percent. The normal seasonal drop in the rate of unemployment between February and March did not take place in 1982 as the nation plunged deeper into the recession.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment rose from 86,900 in February to 87,400 in March. This 500 increase was concentrated in the nonmanufacturing sector with total manufacturing jobs remaining at the February level. Nonmanufacturing industries recording significant changes in employment levels since February include: construction, up 200; trade, up 300; finance, insurance and real estate, down 100; and services, up 100.

Since March, 1982, nonmanufacturing employment shows an overall increase of 1,400. Approximately 1,000 of this jump occurred in the services industry.

HOURS AND EARNINGS

Average hourly earnings of manufacturing and related workers moved upward nine cents from February to reach $8.01 in March. Fostering the jump include, wage rate increase including cost of living, overtime worked at premium pay and an increase in the proportion of higher paid workers. Average weekly hours rose five-tenths of an hour from February to reach 41.1 in March.

During March, 1982, average hourly wages was calculated at $7.48, the average factory work week was estimated to be 40.8 hours and weekly earnings amounted to $305.18.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment is expected to show a seasonal rise during April. Most of the gain will probably be in trade and services.

Preliminary data suggests a drop of about 300 in the number of unemployed persons from March to April. The rate of unemployment will continue on a seasonal down trend until June when students flood the labor market. The decline in unemployment during the spring and summer months should be more pronounced during 1983 than the usual seasonal influences produce if economic conditions continue to show improvement.

MISSOURI SUMMARY MANPOWER REVIEW

BILL NIBLACK, LABOR ECONOMIST TOM HAMMOND, ANALYST DATA MONTH: APRIL, 1983

Missouri employment has increased over the past few months, but unemployment has remained at a high level, suggesting the typical early pattern of an economic recovery.

Since bottoming out in January, total employment has climbed by 112,400 to 2,080,400 in April. Most of the gain took place between February and March, as the April gain was limited to 36,100. The increase over the past three months has been larger than the usual seasonal amount, suggesting that economic improvement has begun. Nonetheless, total employment remains about 17,500 below the level of a year ago.

Unemployment has edged down, dropping by about 23,600 since peaking in February. The April unemployment rate, not seasonally adjusted, is 10.0 percent, compared to 10.7 percent in March and 11.4 percent in February. Although this drop has been substantial, it does not appear to be as large as usually occurs in the spring, meaning that underlying unemployment remains high. This is not unusual in the early phases of a recovery, when workers tend to re-enter the labor force in response to perceived improvements in economic conditions.

Bolstering this interpretation is the fact that the labor force has resumed growth, climbing by about 100,000 between January and April, a greater amount than would be expected solely on seasonal grounds. The labor force had remained

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

relatively constant, except for seasonal change, from the early months of 1981 until dropping sharply in January 1983. The growth since January has brought it back up to about the level which prevailed two years ago.

Nonfarm payroll employment has also grown in the months since January but not nearly as sharply as total employment. Indeed, the growth appears to be just the usual seasonal amount, with no economic improvement. Between January and April, nonagricultural wage and salary employment increased by 35,600, but the April figure of 1,903,100 remains about 23,400 jobs below the year-earlier level. The same general pattern was experienced by both the manufacturing and nonmanufacturing sectors, but with most of the job loss occurring in the manufacturing industries. Employment in manufacturing is estimated at 395,800 in April, only 1200 more than in March. Nonmanufacturing employment increased by 17,900 to 1,507,300 in April, with gains occurring in construction, retail trade, and services.

The factory workweek jumped sharply in April, climbing by six-tenths of an hour to 39.8 hours, the highest level in almost two years. Such increases frequently precede increases in employment. The gain was even more pronounced in the durable goods industries, where average weekly hours of production workers jumped by eight-tenths of an hour to 41.1, on the strength of gains in almost all reported industries. Nondurable goods industries experienced an overall gain of four-tenths of an hour to 38.2, with increases noted in apparel, paper, and leather manufacturing. Food and chemical manufacturing experienced shorter workweeks.

Along with the increase in hours worked came a gain of $4.87 in average weekly earnings. The April figure of $348.65 was 8.9 percent above the year-earlier level. The average hourly earnings of $8.76 was little different from March.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity showed a substantial seasonal decrease between March and April. Total weeks of unemployment claimed under the various programs dropped by 16.5 percent to 406,900, while total benefit payments fell by about $5.4 million to $30.7 million. Most industries experienced decreasing claims, with large absolute drops noted in construction, retail trade, and services.

New claims for unemployment insurance decreased slightly during the month, dropping by 1.9 percent to 55,200.

ECONOMIC CONDITIONS AND OUTLOOK

The expected gain in national employment finally materialized in April. Seasonally adjusted total employment grew by 355,000, while nearly three-fourths of reported industry groups showed increases in payroll employment. Unemployment remained high, as is typical of the early stage of a recovery. On a seasonally adusted basis, 10.2 percent of the civilian labor force was unemployed in April, not significantly different from March's 10.3 percent rate.

The recovery appears to be in place, although the rapid improvement that was earlier hoped for does not appear to be materializing. Accelerating gains in employment may take place in upcoming months, especially next year. Growth in the labor force will probably help keep unemployment at a high level for some time, with significant drops not occurring before next year.

In Missouri, total employment usually increases in May and June before dropping down some in the latter part of the summer. Unemployment may drop a little further in May before the summer bulge hits in June.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

APRIL, 1983

RANDALL E. CLARK, ANALYST

The area labor market showed substantial improvement in April 1983. Some seasonal improvement usually does occur from March to April, but employment gains in several industries exceeded normal seasonal upturns. The improvement would have been greater if bad weather had not held down construction employment.

Wage and salaried employment in April 1983 was 589,300, up by 5,700 from the March 1983 total of 583,600. The most significant single gain was in motor vehicle manufacturing, whose increase of 500 jobs was entirely the result of higher new car sales. Gains of 2,300 jobs in services and 1,400 in retail trade resulted from a combination of seasonal and economic factors. Smaller gains in transportation and wholesale trade appeared to be caused by the stronger economy. Rain and snow prevented work on some construction projects and held construction employment to a gain of 100.

Wage and salaried employment fell by 15,600 from April 1982 to April 1983. The one major employment gain was in motor vehicle manufacturing, which showed an increase of 2,000 jobs. The gain is significant inasmuch as this industry has traditionally anticipated trends in the labor market. Losses in other industries were still heavy, but were smaller than the 12-month losses for the previous few months, indicating that the labor market may be emerging from its long slump.

Total unemployment on a place-of-residence basis was 58,500 in April 1983 for 8.7 per cent of the labor force, compared to 62,600 in March 1983 for 9.3 per cent of the labor force and 55,200 in April 1982 for 8.2 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

The area labor market is expected to show substantial improvement in May 1983. Some 3,000 auto assembly workers will return to the job as one area assembly plant begins production of a new product line.

Employment in construction should also increase sharply as good weather permits work to begin on new commercial and residential projects. With demand rising for materials, manufacturing and transportation should also post employment gains. Employment in services will be seasonally higher, although the gain will be held down by layoffs at area hospitals. Seasonal layoffs of tax processors will push government employment lower. Unemployment is expected to be 7.8 per cent of the labor force in May 1983, compared to 8.7 per cent in April 1983 and 7.5 per cent in May 1982.

The entry of summer job seekers into the labor market will push unemployment higher in June 1983. Although public and private summer job programs will hold the jobless rate down to some extent, some 25 per cent of summer job seekers are not expected to be successful. Seasonal gains and a stronger economy should produce employment gains in manufacturing, construction, transportation and wholesale and retail trade. Summer job programs will raise employment in services and will partially offset the layoffs of non-teaching school personnel in state and local government. Unemployment is expected to be 8.5 per cent of the labor force in June 1983, compared to 8.6 per cent in June 1982.

SPECIAL ENERGY REPORT

Supplies of fuel are expected to be adequate to meet the needs of area motorists and utility companies this summer. No layoffs are expected because of energy shortages.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 40,327 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of April 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	17.4
	22-44	65.3
	45 and over	17.3
Sex:	Male	63.2
	Female	36.8
Racial or Ethnic Group		
	Black	25.8
	Other Non-White	1.1
	Hispanic	2.1
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	62.4
	Veterans	22.2
	Handicapped	2.9

SOURCE: SMSA 3760, ESARS Table 91, dated 04-30-83.

JOB PLACEMENTS

During April 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 6,626 and job placements totaled 2,305. There were 1,105 veteran referrals in April 1983, with 282 veteran placements. During March 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 6,567 and job placements 2,033. There were 1,099 veteran referrals in March 1983, with 253 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

APRIL, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate in April was 10.6%. The number of area unemployed decreased 3500 from March to April but this 2.8% drop was less than the normal decrease that occurs over the month. Employment also showed some improvement, +4700, but this 0.5% increase was also less than normal. The normal seasonal 8.8% decrease in unemployment and 0.7% increase in employment did not occur this year because of wet spring weather and slow improvement so far being observed in labor market conditions during the early stages of the national economic recovery. Unemployment continues to remain above, and employment below, year ago levels. The unemployment rate in April 1982 was 9.1%. There were 100 labor disputants this month, last month, and a year ago.

MANUFACTURING

Manufacturing employment declined 600 over the month as small gains in some industries were not enough to counter balance decreases occurring in such industries as motor vehicles and chemicals. The local chemical industry has experienced a number of permanent staff decreases and temporary lay offs since August, 1982 and a temporary lay off of 400 workers for inventory reduction at a local auto supply manufacturer affected motor vehicle employment. Over the year manufacturing employment declined 10200, or -4.6%. Industries affected most during the recession, such as primary metals and fabricated metals continue to show substantial employment declines from 1982 levels.

NONMANUFACTURING

Nonmanufacturing employment increased 7400 over the month. Retail trade, real estate, and hotel and recreation services all improved seasonally. The construction employment increase, +1200, was somewhat less than normal due to wet spring weather conditions. State and local government employment increased 1200 due to some non-teaching personnel recalled after being laid off during early spring break in March at some area higher education institutions. Over the year nonmanufacturing employment declined 3800. Mergers, deregulation, and the recession have affected transportation, -1200, and continued declining or stagnant revenues has caused state and local government employment to drop 4900.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 4400 in April from March. In the Missouri portion of the SMSA they were down 3000 and in the Illinois portion they were down 1400.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
APRIL, 1983

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force rose 1,900 from March to reach 112,100 in April. The number of unemployed workers decreased from 9,400 in March to 8,900 in April. The rate of unemployment continued on the down trend decreasing from 8.5 percent in March to 7.9 percent in April.

During April, 1982, the labor force stood at 109,200, the number of unemployed persons amounted to 7,600 and the rate of unemployment was calculated at 6.9 percent.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment jumped from 87,300 in March to 89,300 in April. Both segments, manufacturing and nonmanufacturing, posted employment gains during the one month period.

April marks the second straight month of increased jobs in manufacturing with a gain of 200. This jump all occurred in the durable goods manufacturing industries while the nondurable goods group was characterized by stability.

Nonmanufacturing jobs rose 1,800 during the 30 days to a total of 72,100. The most significant gains were noted in construction, trade, and services.

Since one year ago, nonmanufacturing jobs show an increase of 2,200. During the 12 month period, gains were posted in construction, trade, services and government.

HOURS AND EARNINGS

Average hourly earnings for manufacturing production and related workers dropped one cent from March to $8.03 in April. Average weekly hours worked decreased from 40.9 in March to 40.8 in April. Average weekly earnings during April came to $327.62.

During April, 1982, average hourly earnings came to $7.44, the factory work week averaged 40.8 hours and weekly earnings were calculated at $303.55.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Overall payrolled employment is expected to show very little change during May. Small employment gains in some areas will probably be off-set by decreased employment in services and government as state and local schools wind down the school term.

Preliminary data suggests the rate of unemployment will fall another four to five tenths of a percentage point during May. During June, some upward pressure will be exerted on the rate by students entering the labor force.

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST TOM HAMMOND, ANALYST DATA MONTH: MAY, 1983

Unemployment in Missouri dropped sharply and total employment continued to climb in May, according to preliminary labor force estimates. However, the failure of nonfarm payroll employment to exhibit any underlying growth casts some doubt on how vigorous a recovery is underway in the Missouri labor markets.

The number of jobless Missourians dropped by 19,000 between April and May to 218,400, and the unemployment rate plunged by nine-tenths of a percentage point to 9.3 percent. Although the April-to-May drop was larger than the usual seasonal amount, unemployment in May seems to be about the same as in March, when seasonal conditions are taken into account.

Total employment has continued to climb since bottoming out in January, growing by 41,600 in May to 2,122,500. The increase has been steady and beyond the usual seasonal amount. Total employment is now above the year-earlier level, after being below it for more than a year and a half.

The civilian labor force, estimated at 2,340,900 in May, has also been rising steadily and is now well above the year-earlier level.

The other principal measure of employment -- nonagricultural wage and salary employment -- has been increasing since January, but only at the usual seasonal rate. Both manufacturing and nonmanufacturing remain below year-earlier levels.

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

Seasonal employment gains over the month were noted in construction, retail trade, and services. Small gains also occurred in a variety of durable goods manufacturing industries. This sector as a whole grew by 2700 jobs in May to 221,900 but remains 8700 jobs below the level of May 1982.

The factory workweek remained at 39.7 hours in May, after climbing by half an hour between March and April. The current figure is seven-tenths of an hour above the level of May 1982.

Average hourly earnings of manufacturing production increased by 12 cents to $8.90. This increase pushed average weekly earnings up by $4.76 to $353.33, for a gain of 7.1 percent over the year-earlier level.

UNEMPLOYMENT INSURANCE ACTIVITY

Missouri unemployment insurance activity continued to decrease in May. The total number of weeks of unemployment claimed under the various programs dropped by 8.2 percent to 373,600. Benefit payments fell by a similar percentage, decreasing by nearly $2.8 million to $27.9 million. New claims for unemployment insurance dropped even more sharply, decreasing by 15 percent to 46,900.

Virtually every industry reported drops in claims, with the larger drops noted in construction, transportation equipment manufacturing, transportation and public utilities, retail trade, and services. The main exception to the downward trend was in the manufacture of leather and leather products.

ECONOMIC CONDITIONS AND OUTLOOK

After a rather lackluster first quarter, the economy appears to be moving into a period of rapid economic growth similar to that experienced in earlier recoveries.

The U.S. Commerce Department's preliminary "flash" estimate of gross national product places growth of the nation's output of goods and services at about 6.6 percent in the second quarter, after adjustment for inflation. This compares to a revised rate of only 2.6 percent for the first quarter.

With consumer spending now appearing to be leading the way, prospects for continued growth are brightening. In response to more rapid than expected growth, the Administration has raised its growth forecast. The economy is now forecasted to grow at a 5.5 percent inflation-adjusted rate between the fourth quarter of 1982 (which probably represents the trough of the business cycle) and the fourth quarter of 1983.

National unemployment has continued to drift downward. In each month since February, the seasonally adjusted civilian rate has dropped one-tenth of a percentage point. The May rate of 10.1 percent is seven-tenths of a point below the December peak. This represents a decrease of 800,000 in the number of jobless Americans.

Employment has also been on the rise, with total civilian employment climbing by nearly half a million, on a seasonally adjusted basis, from its bottom point in February. Nonagricultural wage and salary employment has also been increasing since February, with the estimated number of nonfarm payroll jobs growing by more than 700,000, on a seasonally adjusted basis. Both these measures of employment remain below year-earlier levels, however.

In Missouri, seasonal employment growth should continue into June, perhaps with underlying growth accelerating as the seasonal improvement wanes in the later part of the summer. Unemployment usually jumps sharply in June as students and others enter the labor force for the summer. Thereafter unemployment drops until reaching its seasonal low in the fall.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

MAY, 1983

RANDALL E. CLARK, ANALYST

May 1983 saw the area labor market make its strongest one-month advance in almost six years. Employment was higher in all major industries, and the one per cent decrease in the unemployment rate from April to May was the largest since September 1977.

Wage and salaried employment in May 1983 was 597,100, up by 8,700 from the April 1983 total of 588,400. The most significant single employment gain occurred in transportation equipment manufacturing; 2,200 auto assembly workers returned to their jobs to begin building a new line of front wheel drive cars. There were smaller gains in construction-related manufacturing industries (i.e., stone, clay, glass and metal products). Employment in construction and services was seasonally higher. The improving economy produced employment gains in transportation and retail trade, gains that exceeded normal seasonal improvement.

That the recovery still has a distance to go was evident in the drop of 11,600 in wage and salaried employment from May 1982 to May 1983. Manufacturing employment fell by 5,000, a reflection of the wave of layoffs and shutdowns that hit in late 1982. Services, wholesale and retail trade, transportation, and construction all remained below 1982 employment levels because of the poor economy in late 1982 and bad weather in the spring of 1983. Delays in the layoff of tax processors and extra funding for job programs produced a gain of 2,200 in government employment.

Total unemployment on a place-of-residence basis was 53,400 in May 1983 for 7.9 per cent of the labor force, compared to 59,800 in April 1983 for 8.9 per cent of the labor force and 50,600 in May 1982 for 7.5 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

Approximately 15,000 area students will enter the job market in June 1983. Although public and private summer job programs will help many of these young people, 3,000 to 4,000 of them will not be successful in finding work, and unemployment will be higher despite the improving economy. Economic and seasonal factors should produce higher employment in manufacturing, construction, transportation, trade and services. Layoffs of tax processors and non-teaching school personnel will cause lower employment at all levels of government. Unemployment is expected to be 8.4 per cent of the labor force in June 1983, compared to 7.9 per cent in May 1983 and 8.6 per cent in June 1983.

450 workers in primary metal manufacturing will lose their jobs as the result of a plant shutdown in July 1983. This shutdown (hopefully the last resulting from the 1980-1982 recession) will offset gains in other manufacturing industries. Employment should be higher in construction and services, and summer job programs will increase state and local government employment. Some of the unsuccessful summer job seekers will leave the labor market. Unemployment is expected to be 8.0 per cent of the labor force in July 1983 compared to 7.7 per cent in July 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 42,637 applicants in the acitve file for Missouri Job Service offices in the Kansas City Area at the end of May 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	20.1
	22-44	62.9
	45 and over	17.0
Sex:	Male	61.8
	Female	38.2
Racial or Ethnic Group		
	Black	26.8
	Other Non-White	1.2
	Hispanic	2.1
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	58.2
	Veterans	21.4
	Handicapped	2.9

JOB PLACEMENTS

During May 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 7,006 and job placements totaled 2,393. There were 1,051 veteran referrals in May 1983, with 281 veteran placements. During April 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 6,626 and job placments 2,305. There were 1,105 veteran referrals in May 1983, with 282 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

MAY, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate declined from 10.8% in April to 10.4% in May. The labor force increased by 8800 over the month as unemployment declined 3400 and employment increased 12200. Improved weather conditions along with anticipated economic improvement this summer caused the area's unemployment rate to decrease more than expected. The area's unemployment rate still remains above year ago levels. In May, 1982 the rate was 9.3% and during the first five months of 1982 it averaged 9.7% compared to a 1983 average for the same five month period of 11.1%. Slow improvement in the unemployment rate is expected to occur throughout the summer. Some employment recalls along with peak employment levels in the travel and recreation industries will help, but the rate will probably remain above corresponding year ago levels for another three months. There were 100 labor disputants in May and April and 200 in May, 1982.

MANUFACTURING

Manufacturing employment increased 200 over the month. A recall of 400 temporarily laid off workers along with some employment gains at the area auto assembly plants caused motor vehicle employment to increase 600. Little or no change occurred in the other manufacturing industries over the month. Over the year, improved auto sales along with continued preparation of a new auto assembly plant caused motor vehicle employment to increase 1100. Increased sales of new and existing housing helped lumber and furniture to increase employment by 200. The aircraft (+1000) and beverage industries (+100) remained above year ago levels. Most other major manufacturing industries continue to employ fewer workers in 1983 than they did in 1982.

NONMANUFACTURING

Nonmanufacturing employment increased 5700 over the month. Seasonal gains occurred in construction, transportation, trade, and the hotel and recreation service industry. Continued expansion by major airlines serving St. Louis caused air transportation employment to increase 300. Over the year, nonmanufacturing employment declined 6300. State and local government employment, -4100, continues to be responsible for most of this decrease. Improved employment levels have occurred in some major industries, non-railroad transportation (+500), retail trade (+400), services (+1800), and federal government (+200).

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 4700 in May from April. In the Missouri portion of the SMSA they were down 3500 and in the Illinois portion they were down 1200.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	Feb.	Mar.	April	May
INA	16	13	23	6
Agriculture	253	142	77	46

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
MAY, 1983

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force rose 700 from April to reach 111,900 in May. The current May figure is 1,600 above the May 1982 level and is approximately 2,900 higher than the 1982 average.

The rate of unemployment dropped from 8.2 percent in April to 7.5 percent in May. These rates represent 9,100 and 8,400 unemployed persons respectively. The May 1982 rate of unemployment was calculated at 6.4 percent of the labor force.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment inched upward 100 from April to reach 88,900 in May. This is the net result of a 400 gain in manufacturing jobs and an employment decrease of 300 in the nonmanufacturing sector.

Nondurable manufacturing jobs increased 100 during the month while the durable segment accounted for 300 of the jump. Total manufacturing employment, estimated at 17,600, has increased approximately 1,000 since January. The bulk of the gain would be in the form of recalls rather than new jobs. Despite the uptrend in manufacturing employment, the current level is about 900 below the May 1982 mark.

An increase in trade employment coupled with a seasonal drop in services jobs netted a 300 decrease in overall nonmanufacturing jobs during the 30 day period. Total jobs in the services category traditionally drop in May due mostly to reductions at private educational institutions.

HOURS AND EARNINGS

Average hourly earnings of manufacturing production and related workers increased from $8.11 in April to $8.12 in May. This slight rise in hourly earnings was fostered by more overtime worked at premium pay in a portion of the nondurable goods manufacturing segment. Average weekly hours worked rose five-tenths of an hour from April to reach 39.7 hours in May. Average weekly earnings, estimated at $322.36, rose $3.64 from April.

During May 1982, average hourly earnings came to $7.38, weekly hours worked averaged 39.1 and average weekly earnings amounted to $288.56.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment is expected to remain near the May level during June. The rate of unemployment should show a moderate drop despite the entry of students into the labor force.

8/22/83 54530-3 A

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST **TOM HAMMOND, ANALYST** **DATA MONTH: JUNE, 1983**

Missouri unemployment fell by 2400 in June to 217,000 and the unemployment rate dropped by two-tenths of a percentage point to 9.2 percent. Although this drop is not itself large, it is significant because unemployment usually climbs in June as students and other entrants to the labor force swell the ranks of the unemployed. On a seasonally adjusted basis, the drop in unemployment would be the largest experienced since the beginning of the recovery.

Total employment climbed sharply in June, both in over-the-month and over-the-year terms. About 25,000 more Missourians were employed in June than in either May 1983 or June 1982. Although a seasonal increase is normal in June, this increase appears to be greater than the usual amount, providing further evidence of improving labor market conditions. Total employment has been climbing, on a seasonally adjusted basis, since January and has now climbed above year-earlier levels.

The estimate of nonfarm payroll employment continues to lag behind the growth shown in total employment, however. Nonagricultural wage and salary employment grew by only 1000 between May and June and remains about 11,000 below the year-earlier level. Manufacturing employment jumped by 4100 in June, mostly as a result of small increases spread through the durable goods industries.

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

The seasonal drop in state and local government employment, as schools closed for the summer, more than offset gains in construction, services, and retail trade, so that nonmanufacturing employment decreased between May and June.

The factory workweek jumped by half an hour in June, climbing to 40.3 hours. This is the first time in about two years that the average weekly hours of manufacturing production workers has topped 40 hours. Substantial increases were noted in furniture and fixtures; stone, clay, and glass products; primary metal industries; and nonelectrical machinery. Although a drop took place in motor vehicles and equipment manufacturing, the average workweek was still 45.9 hours in this industry.

Average hourly earnings slipped by 3 cents to $8.86, but the increase in average weekly hours caused average weekly earnings to rise by $3.24 to $357.06. This figure is 7.2 percent above the year-earlier level.

EMPLOYMENT SECURITY OPERATIONS

Unemployment insurance activity continued to decline in June. The total number of weeks of unemployment claimed under the various programs dropped by 5.8 percent to 352,000. Benefit payments were down to just under $25 million. Decreases in claims were noted in most industries, especially construction, and manufacturing of leather and transportation equipment.

Job Service activity has been on the increase. In each month so far this year, the number of nonagricultural openings received and the number of nonagricultural placements has exceeded the corresponding month in 1982. In June, more than 15,000 nonagricultural job openings were received, making this the best month in nearly two years. Nearly 11,000 placements were made in the month.

ECONOMIC CONDITIONS AND OUTLOOK

As a whole, Missouri labor market data are showing a recovery which is gaining strength. Total employment has been on the rise all year, even adjusting for usual seasonal movements. With the exception of April's blip, unemployment has been falling consistently; this included a decrease in June when summer gains in the labor force usually drive unemployment upward. Nonagricultural wage and salary employment data remained mired at levels below those of a year earlier, but even here there has been some improvement in manufacturing. The average workweek of manufacturing production workers has shown strong improvement. This is consistent with the usual behavior in the early stages of a recovery, as employers tend to schedule overtime before adding to payrolls.

All evidence is now pointing to a very strong national recovery which is not likely to be derailed in the near future. With final demand growing strongly and businesses building inventories, demand for workers should be increasing in the upcoming months. Indeed, national employment showed a very large gain in June, as total employment grew by nearly 1¼ million, on a seasonally adjusted basis. Nonfarm payroll employment has also been growing, showing an increase of 344,000 between May and June and a gain of nearly a million jobs in the past three months. Unemployment has been edging down since peaking in December, and continuing employment gains should make for further drops in unemployment in upcoming months.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

JUNE, 1983

RANDALL E. CLARK, ANALYST

The area labor market made another strong showing in June 1983. The area unemployment rate fell from May to June despite the usual heavy influx of summer job seekers into the labor force. For the first time since August 1981, the unemployment rate also showed a drop over the last 12 months. Widespread employment gains gave further evidence of the economic recovery that is under way.

Wage and salaried employment in June 1983 was 606,000, up by 9,000 from the May 1983 total of 597,000. The largest gains were in construction and services, which benefited from warmer weather as well as from a stronger economy. Manufacturing, transportation and finance insurance and real estate also showed significant employment gains. Government employment was down as school districts laid off some administrative and custodial employees for the summer.

Wage and salaried employment fell by 4,300 from June 1982 to June 1983. Losses were concentrated in manufacturing (except for the auto industry, which gained 2,400 jobs) transportation and services, all of which suffered through major layoffs late in 1982. Construction employment, however, showed its first 12-month gain since January 1979, and a resurgence in this industry generally means higher employment to follow in other industries.

Total unemployment on a place-of-residence basis was 54,100 in June 1983 for 7.8 per cent of the labor force, compared to 53,900 in May 1983 for 8.0 per cent of the labor force and 59,500 in June 1982 for 8.6 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

The recovery by the area labor market will be temporarily stalled in July 1983. The shutdown of a production unit by a major employer in metal manufacturing will eliminate 500 jobs. One of the area's auto assembly plants will probably have a model changeover shutdown during the July reference week. However, the construction industry should show another substantial employment gain and service employment should be seasonally higher. Unemployment is expected to be 7.9 per cent of the labor force in July 1983, compared to 7.8 per cent in June 1983 and 7.7 per cent in July 1982.

Model changeovers in the auto industry should continue in August 1983. Construction employment should reach its highest level of the year, and construction-related durable goods industries may also add to their payrolls. Most students who were unsuccessful at finding summer work will leave the labor force to prepare to return to school. Unemployment is expected to be 7.8 per cent of the labor force in August, compared to 8.3 per cent in August 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA - MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 44,029 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of June 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	21.8
	22-44	61.7
	45 and over	16.5
Sex:	Male	61.1
	Female	38.9
Racial or Ethnic Group		
	Black	28.2
	Other Non-White	1.2
	Hispanic	2.1
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	51.7
	Veterans	20.7
	Handicapped	2.9

SOURCE: SMSA 3760, ESARS Table 91, dated 06-30-83.

JOB PLACEMENTS

During June 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 8,155 and job placements totaled 2,266. There were 1,150 veteran referrals in June 1983, with 278 veteran placements. During May 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 7,006 and job placements 2,393. There were 1,051 veteran referrals in May 1983, with 281 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

JUNE, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate was 10.6% in June, up slightly from May's 10.5%. The number of unemployed area residents increased 1500, or +1.3%. The number of unemployed from May to June normally increases about 10 to 13% because of the influx of students and new graduates into the labor force looking for summer and full time employment. This year a number of events occurred that kept the increase below normal. Some young people have evidently not searched for work this summer because the recent recession has affected not only regular employment in many industries but also summer job opportunites. These young area residents who do not search for work, because they believe they would not be able to obtain employment, are not included in the unemployment estimate. Some small employment gains have begun to occur in the manufacturing sector and this along with the seasonal employment increases in some nonmanufacturing industries also contributed to holding down the June unemployment increase. These employment increases have come mainly from recalls of laid-off workers. Total employment is still below, and unemployment still above, year ago levels. There were 200 labor disputants in June, 100 in May, and 400 in June 1982.

MANUFACTURING

Manufacturing employment increased 2300 over the month. A seasonal employment increase of 900 occurred in aircraft and meat products declined 100. All other industries either registered small employment increases or were unchanged from May. Over the year, manufacturing employment declined 5800. Most industries are still below or at 1982 levels except lumber and furniture (+100), motor vehicles (+1300), aircraft (+1000), and other nondurables (+200).

NONMANUFACTURING

Nonmanufacturing employment declined 7100 from May to June. Seasonal employment increases in retail trade, construction, and services were over-balanced by a greater decline than normal in local school employment. Transportation, except railroads, increased 200 as the local airline industry continued to add workers to their operations based in St. Louis. Over the year, nonmanufacturing employment is still below year ago levels (-13,700). State and local government has suffered the greatest decline (-14,400) while services has registered the largest increase (+2,800).

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 3400 in June from May. In the Missouri portion of the SMSA they were down 3000 and in the Illinois portion they were down 400.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	Mar.	April	May	June
INA	13	23	6	9
Agriculture	142	77	46	41
Mining	68	78	47	42
Construction	4251	3510	2841	2099

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
JUNE, 1983

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT UNEMPLOYMENT

The Springfield SMSA labor force rose 300 from May to reach 112,100 in June. The rate of unemployment continued on the down trend decreasing from 7.5 percent of the labor force in May to 6.7 percent in June.

During June 1982 the labor force stood at 107,700, the number of unemployed persons totaled 7,100 and the rate of unemployment came to 6.6 percent of the labor force.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment, estimated at 88,500, shows a drop of 400 from May. This reduction represents the net result of a 300 gain in manufacturing jobs and a 700 decrease in nonmanufacturing employment.

There are currently 18,000 working in manufacturing industries, up from 17,700 in May. While manufacturing jobs have been on the increase recently, the June level is 500 below the June 1983 figure.

Nonmanufacturing jobs were off from 71,200 in May to 70,500 in June. The services category employment dropped 200 and government fell 1,000. Both of these changes were seasonal in nature and represents less workers at educational institutions as the school term ended. During the past 12 months nonmanufacturing shows a jump of 1,800 jobs. Most of the increase occurred in construction, trade and services.

HOURS AND EARNINGS

Average hourly earnings of manufacturing and related workers edged downward from $8.11 in May to $8.10 in June. This change is the net result of a wage rate increase in the nondurable goods manufacturing segment and a decrease in hourly earnings of durable goods manufacturing workers.

The average factory work week increased from 39.9 hours in May to 40.2 hours in June.

During June 1982 average hourly earnings amounted to $7.35 and the average weekly hours work were estimated at 41.1.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment is expected to remain near the June level during July. The rate of unemployment is expected to inch downward during the 30 day period. This will be the first month in 1983 that the rate of unemployment is below the year ago rate.

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST **RANDALL CLARK, ANALYST** **DATA MONTH: JULY, 1983**

Missouri unemployment edged back up and total employment slipped down in July after showing unexpectedly strong improvement in June.

Total employment dropped by 20,600 to 2,131,600, while the number of jobless Missourians increased by 3200 to 222,200. The unemployment rate edged up two-tenths of a point to 9.4 percent, the same as in May. In June, unemployment had shown a small drop, contrary to the usual seasonal movement, and employment had shown greater-than-expected growth.

The July drop in total employment is about in line with the usual seasonal change, but the increase in unemployment was unexpected.

This situation can largely be traced to automobile model changeover layoffs. The motor vehicles and equipment industry experienced a drop of employment of about 6900. Although a larger drop (12,400 jobs) was noted in state and local government, this is the usual seasonal decline associated with the summer closing of schools and colleges. The major gainer was the construction industry, which reported an increase of 2600 jobs. Altogether, nonagricultural wage and salary employment dropped by 21,600 jobs to 1,905,200, with about half the drop occurring in durable goods manufacturing and half in the nonmanufacturing industries. Nondurable goods manufacturing showed little change between June and July.

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

July's decrease in employment and increase in unemployment should not be taken to mean that the recovery has been reversed. Total employment was still higher in July than in May, and has shown strong growth since January. Unemployment was not much higher in July than in May, and when the normal summer increases are considered, the trend of unemployment appears to be downward. Compared to a year ago, total employment has increased, while unemployment remains about the same. Nonagricultural wage and salary employment is still about 8500 jobs below the year earlier level and has shown little change, other than usual seasonal ones, during most of this period.

Even though estimated payroll employment has not shown much growth, the factory workweek continues to provide evidence of increasing labor utilization. Average weekly hours of manufacturing production workers edged up a further one-tenth of an hour to 40.5 hours in July, 1.9 hours more than a year ago. The latest figure represents the highest level in more than 5 years. Lengthened workweeks are usually a good leading indicator of future increases in employment.

Average hourly earnings dropped 9 cents in July to $8.75, which was enough to offset the increase in hours and force down average weekly earnings by $2.76 to $354.38. This figure is 8.4 percent higher than the level of July 1982, however.

UNEMPLOYMENT INSURANCE ACTIVITY

Unemployment insurance activity continued to decline in July. Total weeks of unemployment claimed during the month dropped by nearly 20 percent to 284,000, while benefit payments fell by $5.7 million to $19.2 million. Transportation equipment and leather manufacturing were the exceptions to the downward trend.

Initial claims were up slightly in July, increasing from 45,200 in June to 48,900.

ECONOMIC CONDITIONS AND OUTLOOK

National employment and unemployment data continued to show strong advances in July. The seasonally adjusted unemployment rate plunged by half a point, the largest one-month drop in more than 20 years. The civilian rate was 9.3 percent in July, which represented a drop of 1.5 percentage points since peaking last December.

About half a million fewer people were estimated to have been unemployed in July than in June, on a seasonally adjusted basis. This approximately equates to the gain in total employment in the month, as the labor force showed little change. Total civilian employment has risen by about 2.1 million since last December, reaching 101,285,000 in July, a new high.

Payroll employment has also increased steadily, climbing by about half a million in July and by 1.7 million jobs since December.

Economic data continue to point to a third quarter which would rival the second in strength. So far, the recovery has been far stronger than forecasted, but many forecasters now see the rate of growth slowing substantially in the final quarter of the year. If this represents a gradual return to a more sustainable rate of increase, it would not necessarily have adverse impacts on the labor markets.

The usual seasonal pattern in Missouri involves a further decrease in total employment in August, followed by a strong rebound in September. Unemployment should drop substantially in September, then remain at a seasonally low level through the fall. At some point, the strong national labor market growth should make itself felt in the Missouri labor markets, with more definite signs of employment growth and reduced unemployment.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

JULY, 1983

RANDALL E. CLARK, ANALYST

After four straight months of improvement, the area unemployment rate leveled off in July 1983. The number of unemployed summer job seekers fell from June to July, as it normally does, but manufacturing layoffs and seasonal job cuts in local government prevented another drop in the unemployment rate.

Wage and Salaried employment in July 1983 was 597,700, down by 6,900 from the June 1983 total of 604,600. Some 500 workers in primary metals manufacturing lost their jobs as a major production unit was shut down permanently because its operating costs had become too high. Larger in numbers, but less severe in its implications, was the temporary layoff of 3,000 automobile assemblers to allow retooling of a production line for the new model year. Seasonal layoffs of non-teaching personnel by area school districts caused a loss of 4,100 jobs in state and local government. Construction employment rose by 700 as contractors took advantage of the dry weather.

Wage and salaried employment fell by 8,600 from July 1982 to July 1983. Timing of model changeovers in the auto industry (rather than actual job losses) accounted for 3,900 of the drop. Late 1982 layoffs in oil refining and in printing and publishing accounted for 1,900 of the jobs lost in the last 12 months. Employment still lagged below 1982 levels in transportation, wholesale trade and services, but construction and retail trade showed 12-month gains, a result of the stronger economy in 1983.

Total unemployment on a place-of-resident basis was 54,400 in July 1983 for 7.9 per cent of the labor force, compared to 54,600 in June 1983 for 7.9 per cent of the labor force and 52,900 in July 1982 for 7.7 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

The area labor market is not expected to show any major changes between July and August 1983. Model changes will continue in the automobile industry. Construction employment should reach a high for the year, and construction-related manufacturing industries may also show higher employment. Retail trade and services should also have small employment gains. Unemployment is expected to be 7.8 per cent of the labor force, compared to 7.9 per cent in July 1983 and 8.3 per cent in August 1982.

Unemployment should be substantially lower in September 1983. Employment in the auto industry will increase with the completion of model changeovers, and most school employees will return for the fall semester. However, cutbacks in air transportation may cause some jobs to be lost in that industry. Unemployment is expected to be 7.3 per cent of the labor force in September 1983, compared to 8.3 per cent in September 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA – MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 41,603 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of July 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	21.0
	22-44	62.2
	45 and over	16.8
Sex:	Male	61.6
	Female	38.4
Racial or Ethnic Group		
	Black	29.4
	Other Non-White	1.2
	Hispanic	2.1
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	51.7
	Veterans	21.6
	Handicapped	2.9

SOURCE: SMSA 3760, ESARS Table 91, dated 07-31-83.

JOB PLACEMENTS

During July 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 8,345 and job placements totaled 3,569. There were 1,184 veteran referrals in July 1983, with 340 veteran placements. During June 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 8,155 and job placements 2,266. There were 1,150 veteran referrals in June 1983, with 278 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

JULY, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate declined from 10.6% in June to 10.4% in July. Seasonal declines in unemployment are expected from June to July, but this year's decrease was somewhat less than normal. Model change-over layoffs in the auto industry occurred earlier this year than in the past and some permanent layoffs are still occurring in other manufacturing industries. Also, as the economic recovery continues, more discouraged workers are again beginning to look for jobs. These residents, not counted as unemployed when they don't search for work, are beginning to reenter the labor force and are therefore adding themselves to the number of unemployed until they find employment. Over the year, the number of unemployed was 3600 higher than last July. This year-to-year difference has declined sharply since April when 20,400 more area residents were unemployed than in April 1982. Unemployment is expected to drop below year ago levels in the next few months as the recovery continues to create employment opportunities and major recalls of workers, laid off for a long period of time, begin to occur in the area's auto assembly plants. There were 200 labor disputants in July and June, and 400 in July 1982.

MANUFACTURING

Manufacturing employment declined 3700 over the month. Temporary model change-over layoffs affected 3700 workers in motor vehicles and a permanent lay off affected 200 workers at a fabricated metal facility that is closing. Employment gains were expected in lumber and furniture (+200), primary metals (+300), aircraft (+300), food (+100) and leather (+100). Over the year, manufacturing declined 7500. Most industries have still not reached 1982 recession levels although gains have occurred in lumber and furniture, aircraft, beverages, and other nondurables. Motor vehicle employment was down 2500 because no model change-over layoffs were reported in July 1982. Manufacturing employment began the year 13700 below Jan. 1982. Employment is expected to increase above year ago levels by September.

NONMANUFACTURING

Nonmanufacturing declined 2300 over the month as seasonal employment declines occurred in transportation and state and local government. Construction employment continued its seasonal increase as levels rose 1900 over June. Over the year, nonmanufacturing employment increased 600. This is the first month in 1983 that nonmanufacturing employment has been above 1982 comparable levels. Service employment reported the largest increase, +3100, while construction, transportation, and federal government employment registered smaller gains. All other nonmanufacturing industries remain below year ago levels or were unchanged.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were unchanged in July from June. In the Missouri portion of the SMSA they were up 200 and in the Illinois portion they were down 200.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachments is as follows:

Industry	April	May	June	July
INA	23	6	9	8
Agriculture	77	46	41	38

INA	2991	2416	1857	2640
TOTAL	23235	23044	19951	20858

Applications in file and placements made during the fiscal year beginning Oct. 1, 1982 are distributed as follows:

	Female	Vets	-22	Minority	HDCP
Apps. in file, %	44.7	15.9	24.1	35.1	2.6
Placements, %	48.1	14.1	37.1	35.7	2.4

AVAILABLE JOB OPPORTUNITIES

The occupational percentage distribution of the openings received and filled fiscal year 1983 by the Missouri State Employment Service is as follows:

Occupational Group	Openings Received Percent	Openings Filled Percent
Professional, Technical & Managerial	7.0	3.0
Clerical	17.8	15.3
Sales	22.3	26.6
Processing	1.2	1.5
Machine Trades	3.2	2.8
Bench Work	2.4	2.2
Structural Work	4.6	4.1
Motor Freight & Transportation	2.6	2.8
Packaging & Material Handling	7.7	10.2
Domestic	1.9	1.7
Other Services	27.9	28.3
Other Occupations	1.4	1.5

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

The unemployment rate for August, 1983 is expected to be 9.9% and September, 1983, 9.3%.

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
JULY, 1983

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The rate of unemployment in the Springfield SMSA took a somewhat unexpected rise of four-tenths of a percentage point from June to reach 7.2 percent in July. This jump could be considered artificial in nature and mostly reflects workers not eligible for vacation pay who were on short term lay-off during the July survey week. This would be the case mostly at manufacturing establishments that shut the entire plant down for vacation. Actually fewer weeks of unemployment compensation were claimed in July than in June.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Total payrolled employment moved upward 600 from June to reach 88,500 in July. The entire gain occurred in the nonmanufacturing segment as manufacturing jobs held steady at the 18,000 level. A gain of 100 jobs in the nondurable manufacturing segment was off-set by a corresponding drop in the durable goods manufacturing group. July marks the first month during 1983 in which manufacturing employment equaled or exceeded the figure for the corresponding month in 1982. During July one year ago, 17,900 workers were engaged in manufacturing.

Nonmanufacturing jobs rose from 69,900 in June to 70,500 in July. Nonmanufacturing industries recording significant changes in employment levels since June include: Mining and construction up 200; transportation and utilities up 100; trade up 200; and services up 100.

During the most recent 12 months nonmanufacturing employment recorded an increase of 2,200. Significant gains occurred in construction, transportation and utilities, trade and services.

HOURS AND EARNINGS

Average hourly earnings of manufacturing production and related workers increased from $8.11 in June to $8.15 in July. This change reflects some wage rate increases including cost of living and more overtime worked at premium pay. Average weekly hours worked rose two-tenths of an hour to reach 40.4 hours in July.

During July 1982 average hourly earnings amounted to $7.26 and the average factory work week came to 39.0 hours.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment should be fairly stable from July to August. During September seasonal increases can be expected as schools open for the fall term.

The August percentage of unemployment should be substantially lower than the current rate and somewhat below the August 1982 figure which was calculated to be 7.0 percent.

MISSOURI LABOR MARKET REVIEW

BILL NIBLACK, LABOR ECONOMIST RANDALL CLARK, ANALYST DATA MONTH: AUGUST, 1983

Unemployment in Missouri dropped substantially in August, but employment increased only a little as the labor force showed the usual late summer seasonal contraction. The drop in unemployment was a bit larger than the usual seasonal amount for August, suggesting that the effects of the recovery are beginning to be translated into improvement in the unemployment situation in Missouri. The drop in unemployment was about 15,600, as the unemployment rate fell by six-tenths of a percentage point to 8.9 percent, the lowest rate in nearly a year. This is only the second month since 1981 in which unemployment has shown a drop from the corresponding period a year earlier.

Total employment increased by about 4000 in August to 2,142,400. The comparison to year-earlier employment has been in the plus column since May, with August total employment being about 31,900 greater than in August 1982.

Although total nonagricultural wage and salary employment remains fairly flat, this masks some movements which occurred between July and August. Manufacturing employment jumped substantially, climbing by 11,600. Much of this increase can be accounted for by the return to work of auto workers following model changeover layoffs in July, but gains were noted in most other manufacturing industries as well. Most of these were relatively small, with the gain of 1000 jobs in the electrical and electronic equipment industry being the largest reported increase. Nonmanufacturing employment slipped

Prepared by the Missouri Division of Employment Security in cooperation with the U.S. Bureau of Labor Statistics. Estimates are based on monthly reports from cooperating establishments.

Data cover employees who worked or received pay for the payroll period which includes the 12th of the month. The data exclude the self-employed, volunteers or unpaid family workers, and domestic workers. Payroll and hours data cover production and related workers in manufacturing.

Continued from Cover

back by 10,400, primarily due to the telephone strike. Employment in communications and utilities was 11,800 lower in August than in July. State and local government showed a seasonal dip of 2300 jobs in August, while employment in retail trade was seasonally higher, by about 2800 jobs. Construction also showed a gain of 1000 jobs in August, climbing to 82,000. Altogether, there were about 1,905,100 nonfarm payroll jobs in Missouri in August, compared to 1,903,900 in July. The August figure was 12,500 below the year-earlier level. Nonagricultural wage and salary employment has failed to show substantial monthly gains, and employment is little different than it was a year ago, when the effects of the strike are taken into account.

The factory workweek edged up one-tenth of an hour from the revised July level to 40.1 hours in August. This is the third straight month in which average weekly hours of manufacturing production workers has topped the 40-hour mark, the first time this has happended since late 1978. Average hourly earnings edged up by 2 cents to $8.83, while average weekly earnings were up by $1.68 to $353.68, or 9.4 percent above the year-earlier level.

UNEMPLOYMENT INSURANCE ACTIVITY

Unemployment insurance claims continued to decrease in August. Total weeks claimed under the various programs decreased by about 2.8 percent from the July level to 276,000. Benefit payments were down by $550,000 to $18.7 million. Initial claims, numbering 48,700 in August, were about the same as in July.

ECONOMIC CONDITIONS AND OUTLOOK

Economic growth appears to be slowing, but the recovery still seems to be on track. The Commerce Department's preliminary estimate of real gross national product for the third quarter places the growth from the second quarter at about 7 percent. Although this is down substantially from the previous quarter's rate and may be subject to substantial revision, this still represents an unusually rapid rate of growth. Such rates probably cannot be sustained for long periods of time; the decrease in the growth rate from the second to the third quarter may represent a gradual slowing to a more sustainable rate of growth.

National employment continued to show a strong upward trend in August. Total civilian employment, adjusted for seasonal changes, increased by nearly 300,000 between July and August and is now 2,470,000 greater than at the trough last December. Nonfarm payroll employment showed a seasonal adjusted drop of about 410,000 between July and August, as nearly 700,000 communications workers were involved in a nationwide strike. (Strikers are not counted as being employed in the nonagricultural wage and salary employment data.) Even with this drop, there were about 1,126,000 more workers on nonagricultural payrolls in August than at the trough in December.

August unemployment remained nearly the same as in July, with about 10.7 million people, or 9.5 percent of the civilian labor force, unemployed, on a seasonally adjusted basis. The average duration of unemployment and the number of people who have been unemployed for six months or longer are both decreasing.

Although Missouri labor market statistics have yet to show the same degree of improvement noted in the national data, there are still signs of healthy improvement. Total employment has been steadily on the increase and is now well above the year-earlier level. Unemployment, though still quite high, has begun to drop and should continue to do so through the fall. Nonagricultural wage and salary employment still has not shown substantial growth on a month-to-month basis, but is now similar to year-earlier levels. The return of communications workers from strike and seasonal factors, especially in state and local government with the opening of the school year, should lead to improvement in the months ahead. The continued strength in average weekly hours also suggests upcoming improvement. Subsequent revisions in the estimated employment data, based on comprehensive counts of employment called benchmarks, may also show employment to have been higher than originally estimated. As a whole then, the Missouri outlook is for continuing increases in employment, with further drops in unemployment.

KANSAS CITY LABOR MARKET REVIEW

The Kansas City Area includes Jackson, Clay, Cass, Platte and Ray counties in Missouri and Johnson and Wyandotte counties in Kansas. The 1980 population for the Area has been published at 1,327,020 persons by the U.S. Bureau of the Census.

AUGUST, 1983

RANDALL E. CLARK, ANALYST

After leveling off in July, the area unemployment rate continued to edge down to its lowest level since May 1982. Major employment gains in automobile manufacturing, retail trade and finance, insurance and real estate dropped the unemployment rate down to 7.5 per cent despite a major strike in two communications-related industries and the usual seasonal job losses. The number of summer job seekers fell from July to August, but the area labor market gained 6,400 workers and 11,200 employed workers over "year ago" figures contributing to the lower unemployment rate.

Wage and salaried employment in August 1983 was 590,000, down by 3,300 from the July 1983 total of 593,300. The most significant effect on August employment was the communications workers strike, which accounted for the loss of 2,300 jobs in electrical equipment manufacturing and 4,000 jobs in communications. Some 3,000 workers in transportation equipment returned to their jobs after model changeovers were completed at one area auto assembly plant. The continued seasonal lay-offs of teaching and non-teaching personnel and summer local government workers resulted in a loss of 900 state and local government jobs. After a strong rally during the dry early summer, about 400 jobs were lost in the construction industry, as many projects were completed. Retail employment showed a seasonal gain of 1,000 jobs. Other bright spots were gains of 200 jobs in finance, insurance and real estate and 200 jobs in machinery.

Wage and salaried employment fell by 12,000 from August 1982 to August 1983. The largest share of those losses was concentrated in electrical equipment and communications. Major losses occurred in services (3,500 jobs) and in state and local government (5,600 jobs), and job losses in printing and publishing, chemicals and primary metals accounted for another 2,400 jobs lost in the last 12 months. The automobile industry continued to show strength with a gain of 3,100 jobs over the last 12-month period. Employment gains above 1982 levels, 1,300 jobs in construction, 1,100 jobs in retail trade and 500 jobs in finance, insurance and real estate, added to the strength of the economy.

Total unemployment on a place-of-residence basis was 50,900 in August 1983 for 7.5 per cent of the labor force, compared to 55,000 in July 1983 for 8.0 per cent of the labor force and 55,700 in August 1982 for 8.3 per cent of the labor force.

EMPLOYMENT AND UNEMPLOYMENT FORECAST

Seasonal developments, the end of the communications workers' strike and continued confidence in the economy should produce a slight reduction in area unemployment in September

Continued on Page 8

Continued from Page 7

1983. Students will return to school and some school employees will return to work with the start of the fall semester. The communications workers who were on strike in August will return to their jobs. One area auto assembly plant is expected to temporarily shut down for model changeovers. Seasonal job losses will continue in construction and services. An announced curtailment in the operation of one air transportation firm should result in the lost of some jobs. Retail trade and finance, insurance and real estate should have small employment gains. Unemployment is expected to be 7.4 per cent of the labor force in September, compared to 7.5 per cent in August 1983 and 8.3 per cent in September 1982.

With the completion of model changeovers and the announced beginning of a second shift at one area auto assembly plant, the area's labor market should continue to show slight improvement from September to October 1983. Seasonal job losses will continue in services and construction. Recent competition in the air transportation industry could result in some additional jobs. Unemployment is expected to be 7.3 per cent in October 1983, compared to 7.9 per cent in October 1982.

SPECIAL ENERGY REPORT

No new developments have been reported.

KANSAS CITY AREA –
MISSOURI JOB SERVICE STATISTICS

Latest available data from the Employment Service Automated Reporting System (ESARS) indicated 40,436 applicants in the active file for Missouri Job Service offices in the Kansas City Area at the end of August 1983. Breakdowns of the figure according to applicant characteristics are as follows:

General Characteristics		Per Cent
Age:	Under 22	19.9
	22-44	63.1
	45 and over	17.0
Sex:	Male	60.9
	Female	39.1
Racial or Ethnic Group		
	Black	29.7
	Other Non-White	1.2
	Hispanic	2.0
Miscellaneous Characteristics		Per Cent
	Unemployment Insurance Claimants	50.6
	Veterans	22.0
	Handicapped	2.8

SOURCE: SMSA 3760, ESARS Table 91, dated August 31, 1983.

JOB PLACEMENTS

During August 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 11,489 and job placements totaled 5,280. There were 1,622 veteran referrals in August 1983, with 517 veteran placements. During July 1983, referrals to jobs by Missouri Job Service offices in the Kansas City Area totaled 8,345 and job placements 3,569. There were 1,184 veteran referrals in July 1983, with 340 veteran placements.

ST. LOUIS LABOR MARKET REVIEW

The St. Louis Area includes the City of St. Louis, and St. Louis, St. Charles, Jefferson and Franklin Counties in Missouri; and Clinton, Madison, Monroe and St. Clair Counties in Illinois. The 1980 population for the Area was stated as 2,355,276 persons by the U.S. Bureau of the Census.

AUGUST, 1983

RUSSELL SIGNORINO, ANALYST

AREA LABOR FORCE DEVELOPMENTS

The St. Louis SMSA unemployment rate declined from 10.4% in July to 10.0% in August. Employment recalls of workers laid-off temporarily and indefinitely in manufacturing along with continued improvement in construction and trade accounted for most of the decrease in unemployment. Over the year, unemployment still remains above corresponding 1982 levels. This higher level, along with the increase in total employed, has caused the St. Louis labor force to expand by 15,200. Labor force reentrants, former discouraged workers, along with the difficulty still faced by long term unemployed in obtaining jobs, will keep the unemployment rate at a high level throughout the rest of 1983. Most local area manufacturing industries, except motor vehicles, still do not expect major employment increases to occur in their sectors this year and seasonal employment declines will begin to occur in nonmanufacturing beginning in September. There were 8500 labor disputants in August, 200 in July, and 1300 in August 1982.

MANUFACTURING

Manufacturing employment increased 4500 over the month. Recalls of workers that were on temporary or indefinite lay-off in July boosted motor vehicle employment by 4700. Smaller employment recalls occurred in nonelectrical machinery (+400) and food (+300). A strike in electrical equipment caused employment in that industry to decline by 300. Over the year, manufacturing is 3200 below 1982 levels. Primary metals (-2400) and fabricated metals (-1400) continue to be the two manufacturing industries which have lost the most workers over the year. Motor vehicle employment is 2300 higher and is expected to improve even more throughout the year as three new assembly lines open, two in September and one in December. Aircraft, beverages, and other nondurables remained above year ago levels.

NONMANUFACTURING

Nonmanufacturing declined 9600 over the month. A strike affecting 7900 workers occurred in communications and seasonal declines occurred in the services (-1400) and state and local school employment (-2200). Construction (+1400) and trade (+400) continued to improve. Over the year, nonmanufacturing declined 5000. This decrease was caused by the 7900 labor disputants this August in communications. Construction, non-rail transportation, services, and federal government remained above

1982 levels. Railroads (-600) and state and local government (-1700) continued to register declines.

UNEMPLOYMENT AND MANPOWER RESOURCES

State UI continued claimants in the SMSA were down 4800 in August from July. In the Missouri portion of the SMSA they were down 3500 and in the Illinois portion they were down 1300.

The distribution of weeks claimed by intrastate Missouri resident claimants by industry attachment is as follows:

Industry	May	June	July	Aug.
INA	6	9	8	16
Agriculture	46	41	38	41
Mining	47	42	39	21
Construction	2841	2099	1792	1610

SPRINGFIELD LABOR MARKET REVIEW
(GREENE AND CHRISTIAN COUNTIES)
AUGUST, 1983

LLOYD BANWART, ANALYST

CIVILIAN LABOR FORCE, EMPLOYMENT AND UNEMPLOYMENT

The Springfield SMSA labor force increased from 114,200 in July to 114,800 in August. This is the net result of an increase of 1,000 in total employment and a drop of 400 in unemployment.

The number of unemployed persons fell from 8,300 in July to 7,900 in August. The rate of unemployment moved downward from 7.3 percent in July to 6.9 percent in August. The somewhat elevated rate in July includes a number of workers who were not eligible for vacation pay and become temporarily laid-off as local plants shut down for vacations.

NONAGRICULTURAL WAGE & SALARY EMPLOYMENT

Payrolled employment rose from 88,600 in July to 89,600 in August. Manufacturing jobs increased 300 during the month while a jump of 1,000 was noted in the nonmanufacturing segment. Nonmanufacturing industries recording significant changes in employment levels since July include: trade, up 400; services, up 1,000 and state and local government, down 700. The jump in services mostly reflects changes associated with seasonal trends in private educational institutions.

HOURS AND EARNINGS

Average hourly earnings of manufacturing production and related workers increased from $8.20 in July to $8.22 in August. This change is the net result of a four cent an hour decrease in durable manufacturing wages and an increase of twelve cents an hour in nondurable wages. Average weekly hours worked dropped from 40.5 in July to 39.9 in August.

During August, 1982, the average hourly wage amounted to $7.53 and the average factory work week was calculated to be 39.2 hours.

EMPLOYMENT AND UNEMPLOYMENT OUTLOOK

Payrolled employment is expected to show some seasonal increase in September. Most of the anticipated gain will be in state and local government as public schools open for the fall term.

The rate of unemployment during September will probably remain near the August level or possibly show a slight reduction and be well below the September, 1982 rate which was estimated at 7.5 percent.
